

ES

EXECUTIVE SUMMARY

1

2 **ES.1 Introduction**

3 This draft environmental impact report (EIR) has been prepared to evaluate
4 environmental impacts related to the construction and operation of the City Dock No.
5 1 Marine Research Center Project (hereafter referred to as the “proposed Project”), as
6 proposed by the Los Angeles Harbor Department (LAHD). LAHD administers
7 development within the Port of Los Angeles (Port) and overall Port operations. The
8 proposed Project is located in the Port of Los Angeles, near the San Pedro
9 Community in the City of Los Angeles (Figures ES-1 and ES-2). The proposed
10 project site encompasses Berths 56 through 60 and Berths 70 and 71 within the San
11 Pedro Waterfront area, and is bounded by the East Channel to the west, the Main
12 Channel to the east, 22nd Street to the north, and the open water of the San Pedro Bay
13 to the south. The proposed Project involves development of an urban marine
14 research center within a 28-acre portion of the 400-acre San Pedro Waterfront Master
15 Plan area along the west side of the Los Angeles Harbor’s Main Channel.

16 This Draft EIR fulfills the requirements of the California Environmental Quality Act
17 (CEQA) (California Public Resources Code [PRC] Section 21000 et seq.) and the
18 Guidelines for Implementation of the California Environmental Quality Act of 1970
19 (State CEQA Guidelines) (14 California Code of Regulations [CCR] Section 15000
20 et seq.). LAHD is the CEQA lead agency. Specifically, this Executive Summary has
21 been prepared in accordance with Section 15123(b) of the State CEQA Guidelines,
22 which states that the EIR should contain a brief summary of the proposed actions and
23 its consequences and should identify: (1) each significant effect with proposed
24 mitigation measures and alternatives that would reduce or avoid that effect; (2) areas
25 of controversy known to the lead agency; and (3) issues to be resolved including the
26 choice among alternatives and whether or how to mitigate significant effects.
27 Throughout the Executive Summary are references to various chapters and sections
28 in the Draft EIR where detailed information and analysis can be reviewed.

29 The Draft EIR describes the environmental resources that would be affected by the
30 proposed Project and evaluates the significance of the potential impacts to those
31 resources as a result of constructing and operating the proposed Project.

ES.2 Purpose of this Draft EIR

This Draft EIR will be used to inform decision makers and the public about the potential significant environmental effects of the proposed Project. Section 1.4 in Chapter 1, “Introduction,” describes the agencies that are expected to use this document, including the lead and responsible agencies under CEQA. Section 1.5 describes the scope and content required of an EIR, and Section 1.6 describes the key principles guiding the preparation of this document.

This Draft EIR is being provided to the public for review and comment, and to assist them in participating in the planning process. After public review and comment, a Final EIR will be prepared that will include responses to comments on the Draft EIR received from agencies, organizations, and individuals. The Final EIR will provide the basis for decision making by the CEQA lead agency, as described below, and other responsible agencies.

ES.2.1 CEQA Introduction

LAHD operates the Port under the legal mandates of the Port of Los Angeles Tidelands Trust (Los Angeles City Charter, Article VI, Section 650) and the California Coastal Act (PRC Division 20 Section 30700 et seq.). The Port is one of the only five locations in the state identified in the California Coastal Act for the purposes of international maritime commerce (PRC Division 20 Sections 30700 and 30701). These mandates identify the Port and its facilities as a primary economic/coastal resource of the state and an essential element of the national maritime industry for promotion of commerce, navigation, fisheries, and harbor operations. According to the Tidelands Trust, Port-related activities should be water dependent and should give highest priority to navigation, shipping, and necessary support and access facilities to accommodate the demands of foreign and domestic water borne commerce.

According to Section 15121(a) of the State CEQA Guidelines (CCR, Title 14, Division 6, Chapter 3), the purpose of an EIR is to serve as an informational document that:

...will inform public agency decision-makers and the public generally of the significant environmental effect of a project, identify possible ways to minimize the significant effects, and describe reasonable alternatives to the project.

The actions under consideration by LAHD involve physical changes to the environment that would have a potentially significant impact, as determined in the Initial Study of the Project (see Appendix A). In addition, comments provided by public agencies, including responsible and trustee agencies, and the public in response to the Notice of Preparation (NOP) have also indicated that the proposed Project may have significant impacts. Accordingly, an EIR pursuant to CEQA (PRC Section 21000 et seq.) is required. This Draft EIR evaluates the direct, indirect, and cumulative impacts of the proposed Project in accordance with the provisions set

1 forth in the State CEQA Guidelines. It would be used to address potentially
2 significant environmental issues.

3 The primary intended uses of this Draft EIR by LAHD is to inform agencies considering
4 permit applications and other actions required to construct, lease, and operate the
5 proposed Project and to inform the public of the potential environmental consequences of
6 the proposed Project. The certification by LAHD of the EIR, Notice of Completion, and
7 Statement of Overriding Considerations (if necessary) will document the decision of the
8 Port as to the adequacy of the Draft EIR and will inform subsequent decisions by LAHD
9 regarding approval and construction of the proposed Project. LAHD would use this Draft
10 EIR to support permit applications, construction contracts, leases, and other actions
11 required to implement the proposed Project and to adopt mitigation measures that, where
12 possible, would reduce or eliminate significant environmental impacts.

13 Other agencies (federal, state, regional, and local) that have jurisdiction over an element
14 of the proposed Project or a resource area affected by the proposed Project are expected
15 to use this Draft EIR as part of their approval or permit processes.

16 **ES.2.1.1 CEQA Purpose**

17 The overall purpose of the proposed Project is to adaptively reuse the transit sheds at
18 Berths 57–60 and the adjacent Berths 70–71 proposed project site and existing
19 buildings (e.g., transit centers) to provide world-class marine research facilities and
20 space to bring together leading researchers and entrepreneurs, including the Southern
21 California Marine Institute (SCMI), Southern California universities and colleges,
22 government research agencies, such as the National Oceanographic and Atmospheric
23 Association (NOAA), and businesses to conduct cutting-edge urban marine research
24 and education, and develop technologies to address the most pressing problems of the
25 day. The proposed Project seeks to achieve this purpose through the rehabilitation of
26 the existing buildings and wharves to house state-of-the-art marine research and
27 educational facilities and provide deep draft berthing space for research vessels, and
28 by providing for a cluster of university researchers, educational programs, and spin-
29 off marine science technology ventures.

30 The proposed Project is intended to fulfill the overall project purpose of the LAHD.
31 The proposed Project would provide a world-class urban marine research center and
32 support the research needs of the Southern California region’s universities, research
33 and education institutions, and government agencies, as well as provide an incubator
34 for marine-related business venues.

35 The proposed Project’s objectives were developed based on the community planning
36 process described in Chapter 2, “Project Description.” Objectives are numbered 1
37 through 6 for ease of reference within this chapter.

- 38 1. Adaptively reuse Berths 56–60 and 70–71 to provide marine researchers in
39 Southern California with world-class marine research facilities including
40 laboratories, a seawater circulation system, offices, classrooms, a lecture

- 1 hall/auditorium, and storage space to study the most pressing marine-related
2 problems of the day.
- 3 2. Construct a natural seawater wave tank to allow scientists from around the world
4 to study tsunamis, rouge waves, and the generation of wave energy; conduct
5 vessel and platform studies; and conduct coastal engineering studies.
- 6 3. Provide space within Los Angeles Harbor to relocate, upgrade, and expand
7 SCMI's operations, which are currently located at Berth 260 in Fish Harbor.
- 8 4. Provide an opportunity for SCMI and its members, government and other
9 institutional researchers and research organizations with multiple deep draft
10 berths to accommodate vessels ranging in size from small to large 300-foot
11 vessels adjacent to landside facilities.
- 12 5. Provide a location for a marine-related business incubator park for synergy
13 among research and commercial interests, and develop commercial technologies
14 to address marine environmental problems.
- 15 6. Provide public amenities, including public education classroom space and
16 interpretive exhibits related to marine studies and a cafe, along with a waterfront
17 promenade, consistent with the San Pedro Waterfront Project while not
18 impacting the health and safety of the visiting public.

19 **ES.2.1.2 CEQA Baseline**

20 Section 15125 (a) of the State CEQA Guidelines requires EIRs to include a
21 description of the physical environmental conditions in the vicinity of a proposed
22 project that exist at the time of the NOP. The conditions that existed at the time the
23 NOP was circulated for review (December 2010) are described in Chapter 2, "Project
24 Description," and are also described in appropriate sections within Chapter 3,
25 "Environmental Analysis," when baseline conditions are formulated from multiple
26 sources of data. These environmental conditions constitute the baseline physical
27 conditions by which the CEQA lead agency determines whether an impact is
28 significant. The CEQA baseline represents the setting at a fixed point in time, with
29 no project growth over time. This differs from the No Project Alternative (discussed
30 later in this chapter and in detail in Chapter 5, "Project Alternatives") in that the No
31 Project Alternative addresses what is likely to happen at the site over time, starting
32 from the baseline conditions. The No Project Alternative allows for growth at the
33 proposed project site that would occur without additional discretionary approvals.

34 **ES.3 Proposed Project**

35 **ES.3.1 Overview**

36 The proposed Project involves the development of an urban marine research center
37 within a 28-acre portion of the 400-acre San Pedro Waterfront Master Plan area along
38 the west side of the Los Angeles Harbor's Main Channel. The proposed Project
39 would be built out in two phases and involves the following major elements:

- 1 ■ adaptive reuse of the transit sheds at Berths 57–60 to accommodate marine
2 research laboratory, classroom, and meeting spaces within a collaborative
3 environment to create research synergies among universities, colleges,
4 government agencies, and business ventures.
- 5 ■ wharf retrofits of Berths 57–60 and related infrastructure, including a seawater
6 circulation system and berthing facilities for large research vessels as well as
7 street improvements;
- 8 ■ construction of a new building at Berth 56 with classrooms and a lecture
9 hall/auditorium;
- 10 ■ relocation of SCMI from its existing location at Berth 260 on Terminal Island to
11 Berths 56 and 57;
- 12 ■ development of an interpretive center open to the public;
- 13 ■ establishment of a marine science business park/incubator space with offices and
14 research laboratory space within Berths 58–60 transit sheds;
- 15 ■ installation of floating docks in the East Channel to accommodate smaller
16 research vessels;
- 17 ■ integration with and development of the waterfront promenade along the water’s
18 edge, consistent with the approved San Pedro Waterfront Project while not
19 impacting the health and safety of the visiting public; and
- 20 ■ development of Berths 70 and 71, following the planned demolition and
21 remediation of the existing Westway Terminal site. This development would
22 include the construction of a new building for NOAA operations, the use of
23 existing berthing space for research vessels, and the construction of a new
24 building to host a natural seawater wave tank facility.

25 Refer to Figure ES-3 for a visual representation of the major elements of the
26 proposed Project.

27 **ES.3.2 Local Setting**

28 The Port is located at the southernmost portion of the City and comprises 43 miles of
29 waterfront and 7,500 acres of land and water, with approximately 300 commercial
30 berths. The Port is approximately 23 miles south of downtown Los Angeles and is
31 surrounded by the community of San Pedro to the west, the Wilmington community
32 to the north, the Port of Long Beach to the east, and the Pacific Ocean to the south.

33 The Port is an area of mixed uses, supporting various maritime-themed activities.
34 Port operations are predominantly centered on shipping activities, including
35 containerized, break-bulk, dry-bulk, liquid-bulk, auto, and intermodal rail shipping.
36 In addition to the large shipping industry at the Port, there is also a cruise ship
37 industry and a commercial fishing fleet. The Port also accommodates boat repair
38 yards and provides slips for approximately 3,950 recreational vessels, 150
39 commercial fishing boats, 35 miscellaneous small service crafts, and 15 charter
40 vessels that handle sportfishing and harbor cruises. The Port has retail shops and

1 restaurants, primarily along the west side of the Main Channel. It also has recreation,
2 community, and educational facilities, such as a public swimming beach, Cabrillo
3 Beach Youth Waterfront Sports Center, the Cabrillo Marine Aquarium, the Los
4 Angeles Maritime Museum, 22nd Street Park, and the Wilmington Waterfront Park.
5 Figure ES-1 shows the regional location of the proposed project area.

6 **ES.3.2.1 Project Site**

7 The proposed project site consists of 28 acres within the Port near the San Pedro
8 Community and includes Berths 56 through 60 and Berths 70 and 71 within the San
9 Pedro Waterfront area. The project site also includes a 4.5-acre parking lot adjacent
10 to the 28-acre site across 22nd Street and 1.3-acre site at Berth 260, the current
11 location of SCMI, for a total of 33.8 acres. At the local level, the proposed project
12 site is bounded by the East Channel to the west, the Main Channel to the east, 22nd
13 Street to the north, and the open water of the San Pedro Bay to the south. Local
14 access to the site is provided by 22nd Street and Sampson Way. Figure ES-2 shows
15 the local proposed project setting.

16 The existing site comprises eight berths, including Berths 56 through 60, 70 and 71
17 (former Westway Terminal Site), and 260 (the existing SCMI facility). The existing
18 Berths 56 through 60, 70, and 71 were constructed between the 1910s and 1930s, and
19 several buildings within Berths 56, 57, 58–60, and 70–71 are considered eligible for
20 listing as historically significant resources (see Section 3.4, “Cultural Resources”).
21 Figure ES-4 shows the existing conditions on the proposed project site.

22 **ES.3.2.1.1 Berth 56 (Pan-Am Terminal Facility Site)**

23 Berth 56 is located along the southern edge of 22nd Street in the northwestern portion
24 of the proposed project site. Berth 56 contains the Pan-Am Terminal Facility
25 Building, an approximately 1,600-square-foot building operated as a field office for
26 the California Department of Fish and Game (CDFG). The field office is
27 immediately adjacent to the proposed project boundary and is served by a 16-space
28 parking lot and a vessel berth. The portion of Berth 56 within the proposed project
29 boundary is a vacant area of approximately 0.65 acres.

30 **ES.3.2.1.2 Berth 57 (Transit Shed)**

31 Berth 57 is occupied by one tenant: the San Pedro Bait Company (SP Bait Company).
32 The second tenant, Crescent Warehouse Company, Ltd. (Crescent), recently moved
33 to the Port of Long Beach.¹ The SP Bait Company occupies 14,240 square feet on
34 the Berth 57 wharf, which is used for general bait barge maintenance (e.g., welding,
35 steel cutting, manual painting) as well as storage. Of the 14,240 square feet, 8,240
36 square feet is for ingress and egress only. The SP Bait Company also occupies 2,280

¹ The environmental impacts associated with the relocation of Crescent operations were considered by the Port of Long Beach and determined exempt from CEQA (Cameron pers. comm.).

1 square feet of water adjacent to the wharf, which is used for docking commercial
2 fishing boats and the occasional docking of the bait barge during routine
3 maintenance. In addition, there are also some surface parking spaces reserved for the
4 SP Bait Company.

5 Crescent occupied a portion of the transit shed located at Berth 57. The transit shed
6 at Berth 57 is a single-story steel-frame structure built in the mid-1920s, which
7 Crescent used to store hay. This 46,000-square-foot wood-framed rectangular
8 building is approximately 500 feet long by 93 feet wide and 25 feet high. Clad in
9 corrugated metal, the transit shed includes a loading dock that spans the full
10 horizontal length of the north side of the building. Attached to the shed is an
11 additional 3,640-square-foot wood frame façade on its north side (facing East 22nd
12 Street) that was added in 1933 and which most recently housed Crescent
13 administrative operations. A structural assessment conducted by LAHD for the
14 building concluded that the roof and siding appear to be in good condition with some
15 corrosion (Port of Los Angeles 2002). However, the steel rolling doors that provide
16 access to the loading dock are unstable to lateral forces due to the absence of bracing
17 elements. In addition, the building lacks solid connections between some of its
18 columns and the roof trusses, and there is some evidence of corrosion in some of the
19 steel columns. The building has been determined eligible for listing in the National
20 Register of Historic Places (NRHP) and the California Register of Historical
21 Resources (CRHR), and as a City of Los Angeles Historic-Cultural Monument (ICF
22 Jones & Stokes 2008).

23 **ES.3.2.1.3 Berths 58–60 (Transit Shed)**

24 The transit shed at Berths 58 through 60 is a single-story steel-frame structure built in
25 the 1910s. This 180,000-square-foot rectangular building measures 1,800 feet long
26 by 100 feet wide and is approximately 35 feet high, and includes a loading dock that
27 spans the full horizontal length of the building. The transit shed is clad with
28 corrugated metal siding. A structural assessment for the building concluded that it is
29 in good-to-fair condition with signs of deterioration similar to those noted for the
30 transit shed at Berth 57. The building has been determined eligible for listing in the
31 NRHP and CRHR, and as a City of Los Angeles Historic-Cultural Monument (ICF
32 Jones & Stokes 2008).

33 A water taxi service provided by US Water Taxi is located at the southwestern corner
34 of Berth 60 and includes an office, which is outside of the proposed project
35 boundary. A small maintenance shed, some storage areas for supplies, and a fleet of
36 approximately five vessels is maintained by the taxi service within the proposed
37 project boundary. This service transports supplies and materials to ships anchored
38 outside the breakwater.

39 **ES.3.2.1.4 Berths 57–60 (Wharf)**

40 The original wharf structure was built in 1913 with an apron wharf added in 1938.
41 Both structures are potentially historic, and an historic resources assessment of the

1 wharves has been conducted as part of the special studies performed to support this
2 Draft EIR.

3 Recent Port engineering studies have shown that the slope and wharf structure over
4 which the transit sheds at Berth 57 and Berths 58–60 are built are badly deteriorated
5 with widespread damage to the piles, caps, beams, and deck soffit noted in the
6 inspections.

7 **ES.3.2.1.5 Berths 70–71 (Westway Terminal Site)**

8 The Westway Terminal site encompasses approximately 14.3 acres in the
9 northeastern portion of the proposed project site, between the Main Channel and
10 Signal Street, and occupies a large portion of the south side of the dock at Berths 70–
11 71. The Westway Terminal site includes 134 aboveground storage tanks, associated
12 pipelines and infrastructure, an historic pumping station, the Westway Terminal
13 Building (also known as the Pan-American Petroleum Company Marine Loading
14 Station Facility and the Pan-American Oil Company Pump House), and an office
15 building that was recently in use by Crescent. The Westway/Pan-American Oil
16 Company Pump House within Berth 70 is eligible for listing on the NRHP and
17 CRHR, and as a City of Los Angeles Historic-Cultural Monument (ICF Jones &
18 Stokes 2008). Historic site operations were served by rail, truck, and vessel, and
19 involved the use of oils, lubricants, fuels, and other hazardous materials. Considered
20 a hazardous cargo facility under the Port’s Risk Management Plan (RMP), this
21 facility closed in 2009. A demolition and remediation strategy is being developed in
22 coordination with the Regional Water Quality Control Board (RWQCB).²
23 Completion of a full site characterization study and remedial action design, and an
24 evaluation of future land use restrictions would occur after demolition of the
25 aboveground storage tanks.

26 **ES.3.2.1.6 Sampson Way and 22nd Street Parking Lot**

27 The existing 4.5-acre surface parking lot located north of 22nd Street and east of
28 Sampson Way is located within the proposed project boundary. The parking lot has
29 spaces for 409 vehicles but is currently underused.

30 **ES.3.2.1.7 Berth 260 (Existing SCMI Facility Site)**

31 Berth 260 is located less than 1 mile northeast of the proposed project site on
32 Terminal Island, and contains SCMI’s existing operations, which are proposed to be
33 relocated to the proposed project site. SCMI occupies a 1.3-acre site at 820 South
34 Seaside Avenue and consists of two noncontiguous parcels separated by a building
35 operated by the Los Angeles Port Police. The northern side of the site includes a

² Demolition of the existing tanks and remediation of the Westway Terminal site was analyzed under the San Pedro Waterfront Environmental Impact Statement/Environmental Impact Report (SPW EIS/EIR) and will occur independently of the City Dock No. 1 Project. Therefore, these actions are not part of the proposed Project.

1 19,000-square-foot building that contains offices, laboratories, classrooms, a
2 circulating seawater system, and storage, meeting, and warehouse space. The site
3 also includes a small parking lot, seawater storage tanks, and dock space at which
4 approximately seven vessels are docked. The southern side of the site is occupied by
5 a machine shop, warehouse space, and an open storage yard. The current SCMI
6 facility accommodates approximately 25 researchers and staff, and operates as the
7 shoreside support facility for the University of Southern California's Wrigley Marine
8 Science Center on Catalina Island.

9 **ES.3.2.2 Surrounding Uses**

10 The Port includes a variety of uses supporting various maritime-themed activities, as
11 well as retail shops and restaurants, recreation, community, and educational facilities,
12 as identified in Figure ES-5. Port operations are predominantly centered on shipping
13 activities, including containerized, break-bulk, dry-bulk, liquid-bulk, auto, and
14 intermodal rail shipping. In addition to the large shipping industry at the Port, there
15 is also a cruise ship industry and a commercial fishing fleet.

16 The Port also accommodates boat repair yards and provides slips for approximately
17 3,950 recreational vessels, 150 commercial fishing boats, 35 miscellaneous small
18 service crafts, and 15 charter vessels that handle sportfishing and harbor cruises.
19 Two businesses related to recreational vessels and small service crafts, Pacific
20 Performance Racing and RS Marine Engine Services, are located just north of the
21 proposed project site near the intersection of 22nd Street and Signal Street. Other uses
22 include Cabrillo Beach Park and Cabrillo Beach Youth Waterfront Sports Center,
23 with a public recreation area used for swimming and other beach activities and which
24 is operated by the Los Angeles Department of Recreation and Parks. This area also
25 features a public boat launch and the Cabrillo Marine Aquarium. The aquarium is
26 used for educational purposes and frequently hosts large school groups. Other
27 recreational areas include the 22nd Street Park and the YMCA's Bloch Field.

28 Berths 87–93, located about a mile north of the proposed project site, are currently
29 used by the World Cruise Center, which has been active at the Port for over 30 years.
30 In 2002, the Port renovated Berth 93 at the World Cruise Center to update the Berth
31 93 Cruise Terminal to meet current cruise ports standards for security features and
32 the ability to handle the current class of cruise vessels. The World Cruise Center
33 currently operates out of two existing terminals (Berths 91–92 Terminal and Berth 93
34 Terminal), with two permanent berths (91–92 and 93) and use of a temporary third
35 berth on occasion at Berth 87. Cargo-handling operations occurred at Berths 87–90
36 until August 2006, after which they permanently ceased.

37 There are a variety of land and water uses to the south of the World Cruise Center.
38 Anchored by the Los Angeles Maritime Museum, other existing land and water uses
39 within the proposed project area between 3rd and 6th Streets include tug vessel
40 services, Fire Station #112, Port police dock, and John S. Gibson, Jr. Park along the
41 east side of Harbor Boulevard just north of 6th Street.

1 One of the main draws of the surrounding area is Ports O'Call Village, located
2 between the harbor's Main Channel and Sampson Way from 7th Street to 13th Street.
3 Ports O'Call Village is a faux New England fishing village that was established in
4 1963. This approximately 10-acre commercial retail site also is used as a staging
5 area for various annual events, including the Lobster Festival and the Tall Ship
6 Festival. Just south of Ports O'Call Village in the Southern Pacific Slip (SP Slip) is
7 an active commercial fishing fleet.

8 For over 100 years, Los Angeles Harbor has been a premier location for fishing. The
9 commercial fishing industry in Los Angeles Harbor saw its peak in the 1940s during
10 World War II but declined substantially after the depletion of the sardine and
11 mackerel populations. Today, although smaller than it once was, the commercial
12 fishing fleet at the Port is intact, providing fresh fish to customers throughout the
13 U.S. A fish market, located south of the SP Slip and just north of the proposed
14 project site, includes a number of local seafood retailers at the eastern terminus of
15 22nd Street, including J&D Seafood, Star Fisheries, Standard Seafood, Deluca J Fish,
16 and the Los Angeles Fish & Oyster Company.

17 The Port of Los Angeles Pilot Station and Warehouse No. 1 are located south of the
18 proposed project site, adjacent to the Westway Terminal but outside of the proposed
19 project boundary. Warehouse No.1 is a six-story building completed in 1917 and is
20 listed on the NHRP. The building is occasionally used as warehouse space for the
21 Port, and provides filming locations for television shows and other media.

22 Across the East Channel from City Dock No. 1 are additional transit sheds at Berths
23 54 and 55 (which include fruit storage space for Stevedoring Services of America
24 [SSA]), future cruise facilities at Berths 45 through 47 and 49 through 50, Cabrillo
25 Way Marina Phase II, and public park space. As discussed above, Berth 56 contains
26 the Pan-Am Terminal Facility Building, an approximately 1,600-square-foot building
27 operated as a field office for CDFG. The field office is immediately adjacent to the
28 proposed project boundary. The building was built in 1930 before being moved to its
29 current location in 1940, and has been determined eligible for listing on the NRHP
30 and CRHR.

31 **ES.3.3 Proposed Project Elements**

32 The proposed Project involves a comprehensive plan for the reuse of City Dock No. 1
33 that would be built out in two phases. Phase I, which is anticipated to begin in late
34 2012 and conclude in 2016, would include the conversion of Berths 56 and 57 into a
35 new SCMI facility and development of an interpretive center open to the public. The
36 majority of the remaining proposed project elements would be constructed under
37 Phase II, which is anticipated to commence construction in 2013 and conclude
38 around 2024.

39 All construction staging and material laydown would occur within the proposed
40 project site at Berths 70-71 and the Sampson Way and 22nd Street Parking Lot during
41 Phase I, with the majority of the staging and laydown occurring at the parking lot as
42 Phase II progresses toward completion. In addition, prior to commencement of the

1 proposed Project, the existing occupant (San Pedro Bait Company) would relocate its
 2 operations from the proposed project site. Table ES-1 provides a summary of the two
 3 phases of development by each element and the total area each major element would
 4 contribute to the overall proposed Project. The proposed site plan is illustrated in
 5 Figure ES-3.

6 **Table ES-1.** Elements of the Proposed Project

| <i>Element/Phase</i> | <i>Area</i> |
|---|---------------------------|
| PHASE I (2012–2016) | |
| Berth 56 | |
| <ul style="list-style-type: none"> ▪ Construct Two-Story Learning Center at Berth 56 (150-seat lecture hall/auditorium and classrooms) | 11,500 sf |
| Berth 57 | |

1

2 **ES.3.3.1 Learning Center Building (Berth 56)**

3 Berth 56 improvements under Phase I would include construction of a Learning
 4 Center building. This building would include three classrooms and a 150-seat
 5 auditorium that would feature theater-style seating and related facilities. The
 6 Learning Center would be designed in accordance with the Secretary of the Interior’s
 7 Standards for Rehabilitation (Secretary’s Standards) to ensure architectural
 8 compatibility with adjacent historic resources, including plan review by a qualified
 9 consulting architectural historian for compliance with the Secretary’s Standards.

10 **ES.3.3.2 Transit Shed Upgrades for SCMI (Berth 57)**

11 In order to achieve the conversion of Berth 57, construction would first involve wharf
 12 upgrades and landside improvement to meet current seismic code (see Section
 13 2.3.4.4, in Chapter 2, “Project Description”). Upon completion of the wharf retrofit
 14 and ground improvements, work would begin on upgrading the existing Berth 57
 15 transit shed to current seismic and occupancy codes. Phase I would also include the
 16 demolition of an existing 1933 wood-frame structure to allow construction of a new
 17 glazed entryway to potentially house the public interpretive center. The new
 18 structure would introduce a contemporary, neutral, and visually prominent entrance
 19 into the SCMI facility, distinct from the existing historic transit shed façade. This
 20 new façade may include large glass aquaria at the entrance way. The façade would
 21 reflect the same general shape and profile as the transit shed in height and massing
 22 and could include an area for public education and outreach.

23 The existing Berth 57 transit shed would require extensive renovations prior to
 24 occupancy by SCMI. The SCMI research facility would include office space for
 25 faculty, staff, and administration; laboratory space for teaching and research
 26 laboratories; lab support and building support spaces; and outdoor space for outdoor
 27 teaching, classrooms, and storage space. A seawater circulation and life support
 28 system would be installed at Berth 57, including exterior storage tanks, and seawater
 29 intake/discharge infrastructure adequate to serve City Dock No. 1 urban marine
 30 research center build-out. Additional details of this system are provided in Section
 31 2.3.4.9.

32 Repair, retrofit, and rehabilitation of the transit shed to address structural deficiencies
 33 would be facilitated by the exposed condition of all structural elements. These
 34 include repairing rusted exterior corrugated metal siding with new panels, upgrading
 35 structural connections to meet established seismic and wind load resistance,

1 retrofitting large openings (east and west façades) to ensure stability and water tight
2 openings, sandblasting and repainting corroded steel members and gusset plates, and
3 replacing deteriorated and damaged steel members, as required. In addition, it is
4 anticipated that new traverse and longitudinal frames would be added, interior steel
5 columns repaired, and new concrete encasements around the base of each column
6 constructed. Installation of a continuous perimeter foundation wall, limited to
7 shallow (2 to 3 feet maximum) excavations to inhibit water intrusion at the building
8 perimeter and utility placement may be required. However, as noted under Section
9 2.3.4.4, to gain access to the wharf underlying the transit sheds, the roof and western
10 façade of the transit sheds would be temporarily removed to provide direct access to
11 the wharf for pile driving purposes.

12 All renovations would be required to conform to the Secretary's Standards) for
13 buildings eligible for listing or listed on the NRHP and would undergo a plan review
14 by a qualified consulting architectural historian to ensure compliance. Due to the
15 minimal nature of the existing structure (without insulation), the existing transit sheds
16 would primarily serve as an "outer shell building" to provide basic shelter from water
17 and wind and sun. The proposed marine laboratory, classroom, and office facilities
18 would be within the existing envelope of the transit shed and be constructed by the
19 tenant, SCMI. Therefore, the historic integrity of Berth 57 would be maintained, and,
20 at the same time, it would be adaptively re-used to integrate state of the art fire/life
21 safety protection, seismic resistance, security features, and utility infrastructure as
22 required by its change in use. The exterior of the transit sheds would largely be
23 maintained with the exception of necessary improvements to the siding, roof,
24 cornices, etc. There is a potential that a few of the current loading doors would be
25 replaced with windows, to provide for public viewing/research interpretive
26 opportunities. The following discussion provides a summary of how this proposed
27 project element would generally meet the guidance provided in the Secretary's
28 Standards.

- 29 ■ Existing metal roll-up-style doors would be replaced with new glazed openings
30 to provide more light, air, and egress into the interior spaces. This modification
31 would be consistent with the guidance provided by the Secretary's Standards
32 because it would maintain the repetitive punched openings along the structure's
33 elevations, and most of the roll-up doors are non-original replacements. The
34 design of the new glazing systems would reference the industrial maritime
35 character of the building, with industrial metal sashes and clear glazing, as
36 opposed to vinyl or wood sashes and reflective or opaque glazing.
- 37 ■ Deteriorated historic features would be repaired rather than replaced whenever
38 feasible. Where the severity of deterioration requires replacement of a distinctive
39 feature, the new feature would match the old in design, color, texture, and other
40 visual qualities and, where possible, materials. In the case of the Berth 57 transit
41 shed, rusting corrugated metal siding, steel members, and gusset plates would be
42 repaired, and those materials that cannot be repaired due to advanced
43 deterioration would be replaced in-kind with similar metal materials.
- 44 ■ Correcting structural deficiencies in preparation for the new use is allowable by
45 the Secretary's Standards assuming that the improvements are completed in a
46 manner that preserves the structural system and individual character-defining

1 features. In the case of the interior of the transit shed at Berth 57, the open
2 trusses are character-defining features of the building’s interior. Upgrading the
3 structural connections would not obscure, remove, or otherwise significantly alter
4 in an adverse manner the metal truss system.

- 5 ■ Removal and replacement of portions of the roof and western façade to
6 accommodate the wharf improvements and associated ground improvements at
7 the Berths 57–60 transit shed would reuse the existing materials (corrugated
8 metal roofing and siding) to the extent feasible. Where the severity of
9 deterioration requires replacement of a distinctive feature, the new feature would
10 match the old in design, color, texture, and, where feasible, materials. Please
11 also see discussion in Chapter 2, “Project Description,” Section 2.3.4.4.
- 12 ■ In the case of the Berth 57 transit shed, the new interior “buildings” would not
13 obscure or destroy the interior truss work, allowing these features to read as
14 original features of the building. The new interior structures would not reach the
15 ceiling, thus allowing the open, floor-to-ceiling height of the interior spaces to
16 read visually as they do today (i.e., not obscure the clerestories). The new
17 construction would also retain a significant amount of open interior space,
18 particularly in the center of the building, where long interior vistas are possible
19 (i.e., new construction will be relegated to the side aisles of the structure). The
20 buildings would be differentiated from the old but also compatible with the
21 massing and scale of the building. Therefore, industrial shed-like architecture
22 with exposed steel structures and metal siding would be an appropriate
23 architectural motif for the new construction.
- 24 ■ New additions and adjacent or related new construction would be undertaken in
25 such a manner that, if removed in the future, the essential form and integrity of
26 the historic property and its environment would be unimpaired.

27 **ES.3.3.3 Floating Docks (Berth 57)**

28 Phase I would also develop an 18,500-square-foot, 12-slip floating dock in the East
29 Channel adjacent to Berth 57 to accommodate existing small SCMI research vessels
30 and to allow sufficient capacity for additional small research vessels.

31 **ES.3.3.4 Wharf Improvements and Associated Ground** 32 **Improvements (Berths 57–60)**

33 In order to accommodate the proposed project elements at Berths 57–60, construction
34 would involve first upgrading the adjacent wharf and the existing retaining wall to
35 current seismic code. There are two potential options for the wharf improvements
36 and associated ground improvements.

37 The first option involves installing 127 new 72-inch diameter steel pipe piles
38 (superpiles) with 20 feet of spacing along the footprint of the existing building. The
39 superpiles would be installed in-water and would carry virtually all of the seismic
40 loads, leaving the existing structure to carry only gravity loads. In addition, to retain

1 the existing aesthetic appearance, the new superpiles would be set back from view
2 and the existing viewable rows of piles would be replaced with new concrete piles
3 that would be indistinguishable from the existing condition, which would allow the
4 new wharf to retain the same general appearance. Similar to the existing wharf
5 design, the first row of concrete piles, end caps, and decking along the westernmost
6 edge of the wharf would be reconstructed using approximately 16-inch-square
7 concrete piles spaced about 15 feet apart with a concrete deck resting directly above.
8 As such, these new features would match the old in design, color, texture, and
9 materials, and would conform to the guidance provided by the Secretary's Standards.
10 When detailed plans of the replacement piles are available, they would be reviewed
11 by a qualified consulting architectural historian to ensure compliance with the
12 Secretary's Standards. Work would include removing the roof of the existing transit
13 sheds, demolishing 18,288 square feet of existing concrete slab, installing silt
14 curtains, driving the piles, pouring new pile caps and deck slab, and replacing the
15 roof. Exterior façade removal and reinstallation along the entire length of Berths 58–
16 60 would be required.

17 The second option involves the installation of 252 new 60-inch-diameter steel pipes
18 (in groups of four), which would be located along the back face of the existing
19 seawall, outside of the water, spaced 40 feet apart. The four-pile groups would be
20 installed with a 5-foot-thick concrete pile cap to minimize the displacement of the
21 wharf structure during a seismic event. A 6-inch-thick topping slab acting as a “drag-
22 slab” would extend across the existing deck to tie in the existing wharf structure to
23 the new pile clusters. The existing viewable rows of piles would be replaced with
24 new concrete piles that would be indistinguishable from the existing condition, which
25 would allow the new wharf to retain the same general appearance. Similar to the
26 existing wharf design, the first row of concrete piles, end caps, and decking along the
27 westernmost edge of the wharf would be reconstructed using approximately 16-inch-
28 square concrete piles spaced about 15 feet apart with a concrete deck resting directly
29 above. As such, these new features would match the old in design, color, texture, and
30 materials, and would conform to the guidance provided by the Secretary's Standards.
31 When detailed plans of the replacement piles are available, they would also be
32 reviewed by a qualified consulting architectural historian to ensure compliance with
33 the Secretary's Standards. Work would include removing the roof of the existing
34 transit sheds, demolishing 6,300 square feet of existing concrete slab, installing silt
35 curtains, driving the piles, pouring new pile caps and deck slab, and replacing the
36 roof.

37 Both options would require removal and replacement of the transit shed's roof and
38 western façade, which are considered character-defining features of these historic
39 buildings. In order to comply with the Secretary's Standards, the existing corrugated
40 metal siding and roofing would be removed, stored, and reinstalled to the extent
41 feasible and where such materials and features are currently in good condition, or
42 would be replaced in-kind if such materials are deteriorated beyond repair.

43 Prior to initiating the wharf improvements, the SP Bait Company would relocate
44 operations either across the East Channel or to Fish Harbor. However, the barge
45 would remain in its current location as permitted under the current lease.

1 **ES.3.3.5 Demolition of SCMI Facilities (Berth 260)**

2 Upon completion of the conversion of Berth 57 into new SCMI marine research and
3 educational space, SCMI would be relocated from its Berth 260 location to Berth 57.
4 The existing SCMI building and parking lot at Berth 260 in Fish Harbor on Terminal
5 Island would be vacated. The facilities to be demolished include an existing office
6 and research building, a storage warehouse, a workshop, and shop storage. The
7 floating docks would remain. After structure demolition, the site would be graded
8 and restored as required by LAHD's agreement with SCMI. Any future development
9 associated with this site would be subject to separate environmental review in
10 accordance with CEQA.

11 **ES.3.3.6 Transit Shed Upgrades for Marine Research Facility 12 and Business Incubator Space (Berths 58–60)**

13 Under Phase II, Berths 58–60 would be converted to provide approximately 120,000
14 square feet for marine research facilities and approximately 60,000 square feet of
15 marine business incubator space. These facilities would include office space, which
16 could be utilized for temporary office space for NOAA, until Berths 70–71 are
17 developed. The storage areas at the end of Berth 60 utilized by the water taxi service
18 would be relocated within the general vicinity of Berth 60 to better accommodate the
19 proposed Project.

20 The seawater circulation and life support system would be expanded to Berths 58–60
21 during Phase II, as described further in Chapter 2, "Project Description," Section
22 2.3.4.9. In order to achieve the conversion of Berths 58–60, construction would first
23 involve wharf upgrades and ground improvement to meet current seismic code (see
24 Section 2.3.4.4). Upon completion of the wharf and ground improvements, the next
25 steps would involve upgrading the existing transit shed at Berths 58–60 to meet
26 current seismic code, as well as renovating the building in conformance with the
27 Secretary's Standards for buildings eligible for listing or listed on the NRHP.
28 Conversion of Berths 58–60 would occur much as it would for Berth 57 in that tenant
29 improvements would be constructed within the envelope of the existing transit shed.

30 The repairs and upgrades to the transit shed at Berths 58–60 would be designed to
31 meet the Secretary's Standards' requirement for new work to be compatible with, yet
32 architecturally differentiated from, the old, including plan review by a qualified
33 consulting architectural historian for compliance with the Secretary's Standards. The
34 building parameters discussed above for the Berth 57 transit shed would be
35 applicable to the Berth 58–60 transit shed repairs.

36 **ES.3.3.7 Berths 70 and 71 (Westway Terminal)**

37 Once remediation and restoration activities at Berths 70–71 are completed, the
38 proposed Project would develop Berths 70–71 with a 50,000-square-foot facility for
39 NOAA that would include office and laboratory space. The NOAA building would

1 be designed in accordance with the Secretary's Standards, including plan review by a
2 qualified consulting architectural historian for compliance with the Secretary's
3 Standards.

4 The two-story building would be subordinate to the six-story Municipal Warehouse
5 No. 1 primary historical resource. The building design would reference the adjacent
6 building's maritime industrial character, materials, and massing. As an example,
7 appropriate design cues would be taken from the adjacent Municipal Warehouse No.
8 1 building, such as a rectilinear form with flat roof or monitor roof shapes, exposed
9 exterior walls painted a light color, expressed pilasters, repetitively punched
10 openings, and symmetrically arranged elevation. The use of overly elaborate
11 architectural styles that purposely depart from the simple, maritime industrial
12 character of the area would be avoided, as would large amounts of landscaping,
13 because landscaping is not characteristic of the area.

14 The Westway Terminal Administration Building (also known as the Pan-American
15 Oil Company Pump House) would be adaptively reused by a future occupant. The
16 Mission Revival style character of the Westway Terminal Building would be retained
17 and preserved. The removal of historic materials or alteration of features and spaces
18 that characterize this building, stucco wall cladding, or stepped Mission parapet,
19 would be avoided.

20 Deteriorated historic features of the Westway Terminal Building would be repaired
21 rather than replaced, to the extent feasible. Where the severity of deterioration
22 requires replacement of a distinctive feature, the new feature would match the old in
23 design, color, texture, and other visual qualities and, where possible, materials.
24 Replacement of missing features would be substantiated by documentary, physical,
25 or pictorial evidence, to the extent available.

26 In addition, Berths 70–71 along the Main Channel would be made available for
27 berthing of research vessels, with a maximize vessel length of approximately 250
28 feet. There are no plans to relocate current vessels in the NOAA fleet to the proposed
29 project site, but there is a possibility that future built vessels could be home ported at
30 City Dock No.1. Furthermore, full functioning of the site would include the regular
31 docking of NOAA vessels home-ported in other locations but passing through Los
32 Angeles as part of research expeditions.

33 Redevelopment of Berths 70–71 would also involve development of an 80,000-
34 square-foot steel-reinforced concrete wave tank on the land side, which would be
35 enclosed within its own five-story, 100,000-square-foot building. The wave tank
36 would be constructed to allow the study of tsunamis, rouge waves, and the generation
37 of wave energy, as well as vessel and platform and coastal engineering studies. The
38 wave tank building would include an internal crane mechanism for moving tank
39 baffles and actuators and equipment within the building.

40 The base of the building would be above the mean high tide mark, which would
41 allow for a depth of approximately 10 feet below the existing grade elevation. The
42 first story would comprise the foundation, the next two stories would house the wave
43 tank, the fourth story would include walkways and view platforms, and the final story
44 would provide clearance for cranes to maneuver the wave tank baffles.

1 The building would be designed to be compatible with the historic materials and
2 features of nearby historic structures to the extent feasible given its required size. For
3 example, the design of the wave tank would reference motifs, massing, and materials
4 of other large-scale buildings in the immediate vicinity to help maintain the industrial
5 maritime character of the district.

6 **ES.3.3.8 Marine Research Facility Support Structures**

7 The proposed urban marine research center is intended to support marine research
8 and entrepreneurial business development to address the next generation of ocean-
9 driven challenges and opportunities, such as tidal, wind, and biomass energy;
10 aquaculture and sustainable fisheries; shoreline dynamics; and tsunamis, rouge waves,
11 remote sensing, coastal resource management, marine pollution, marine biochemistry
12 and pharmacology, underwater robotics, and climate change and sea-level rise. The
13 proposed Project would not only support marine research being conducted by
14 Southern California universities and colleges and state and national marine-related
15 agencies, but is also intended to accommodate visiting researchers from around the
16 nation and world.

17 Research would be selected, undertaken, and managed by the tenants/subtenants of
18 City Dock No. 1. Research topics are anticipated to evolve and change over time, as
19 new information and environmental concerns are identified. Similarly, equipment
20 storage needs, seawater circulation system, life support system, and seawater volume
21 needs are anticipated to fluctuate over time based on research being conducted.

22 **ES.3.3.8.1 Marine Research Seawater In-take, Life Support, and** 23 **Treatment Systems**

24 Initially, the seawater system, associated life support and water treatment systems,
25 and water would only serve Berth 57, but the intake/discharge infrastructure would
26 be designed with enough capacity to eventually serve Berths 58–60 and 70–71 once
27 those upgrades and new construction are completed in Phase II. The current
28 combined volume of all Berths 57–60 and 71 marine research tanks is estimated at
29 approximately 1,000,000 gallons.

30 Seawater storage tanks necessary for Berth 57 marine research operations would be
31 installed as part of Phase I. Additional seawater storage tanks would be added as
32 additional research and business incubator facilities are developed in Phase II in
33 order to address the needs of those additional operations. Life support systems, such
34 as water filtration, protein skimmers, and ozone treatment systems would also be
35 constructed and installed, as applicable, to all City Dock No. 1 facilities, with space
36 reserved for additional components to be added as build out of the center proceeds.
37 Chillers and heaters would be installed for seawater systems that require specific
38 temperature requirement.

1 The exact seawater system(s), life support, and treatment systems to be utilized at the
2 facilities would be designed to meet the needs of the research planned to be
3 conducted within each section of the proposed City Dock No. 1 facility, for which
4 specific detailed needs are currently unknown. However, it is anticipated that the
5 seawater systems would comprise a combination of both flow-through and
6 recirculating capabilities. Depending on the system that is ultimately developed, the
7 quantity of discharge, and the types of activities that occur and species handled in the
8 research laboratories, different discharge and filtration requirements may be needed
9 for either ocean or sewer discharge. Conservative intake and discharge estimates for
10 each type of seawater system are included to ensure that potential impacts of both
11 potential marine research facility seawater systems are evaluated and addressed in
12 this Draft EIR.

13 **Seawater In-Take and Discharge**

14 The seawater intake and discharge locations for the Berths 57–60 and 70–71 research
15 facilities are proposed to be located at the southern end of City Dock No.1, slightly
16 extending out past the rip-rap, or under the Berths 57–60 wharves, as deemed most
17 appropriate for the final seawater system design. It is anticipated that the seawater
18 systems would comprise a combination of both flow-through and recirculating
19 capabilities. The intake flows would be limited to 0.5 foot per second or less, which
20 is the velocity identified in the U.S. Environmental Protection Agency (EPA)
21 guidelines as a rate that generally allows fish to pull away from the intake structure
22 and results in de minimus impingement levels. The intake pipe size would be
23 designed to acquire the volume of water needed, while ensuring a velocity of 0.5
24 foot/second or less. The in-take would be located in an area without nearby sensitive
25 habitat, would operate at low flows and velocities, and would be screened to
26 minimize entrainment and impingement. Should a combination of recirculation and
27 flow-through system be used, seawater in-take volume would be significantly less.

28 The discharge rate for flow-through systems would use the same rate as the in-take.
29 The discharge location would be to the west of the proposed in-take location at the
30 southern end of City Dock No.1, or under the Berths 57–58 wharves, as deemed most
31 appropriate for the final seawater system design.

32 **Flow-Through Seawater System**

33 Flow-through seawater systems would take in seawater and circulate it through the
34 marine tanks. After circulation through the tanks, the seawater would be filtered and
35 treated for discharge back to the harbor. This type of system minimizes the need for:
36 (1) seawater storage tanks; (2) life support treatment systems, such as protein
37 skimmers and ozone treatment; (3) seawater discharge to the sewer; and (4)
38 electricity usage. Based on the experience of the existing SCMI operation, it is
39 currently anticipated that filtering systems would be adequate to treat seawater from
40 the flow-through system for ocean discharge.

41 To ensure a healthy environment for marine life, it is anticipated that the water in all
42 tanks would need to be turned over twice daily. This would result in the need to in-

1 take and discharge 2,000,000 gallons per day, twice the volume of the City Dock No.
2 1 research facility tanks, every 24-hour period.

3 In-take seawater may be chilled, or heated, as appropriate for the tanks and research
4 being conducted. Water that is higher or lower than ambient harbor water
5 temperatures would be managed during discharge to achieve ambient water
6 temperatures prior to discharge to the harbor. Seawater used in tanks that house
7 nonnative species would either be discharged to the sewer or processed through
8 enhanced treatment systems, as necessary to eradicate any nonnative species and
9 prevent their introduction into harbor waters.

10 **Recirculating Seawater System**

11 Recirculating seawater systems would take in seawater, circulate it through tanks,
12 and then filter and treat the water to remove biological waste created by marine
13 organisms maintained in the tanks through filtration, protein skimmers, and ozone
14 treatment. The water would then be recirculated through the tanks. New seawater
15 would be introduced on an ongoing basis as needed to maintain the appropriate water
16 quality, and re-used seawater would be discharged. The turnover rate of seawater for
17 recirculation systems varies based on the treatment systems used and marine
18 organisms maintained. Based on the experience of local aquariums an annual
19 turnover rate of between 6 and 10 is anticipated, resulting in daily intake and
20 discharge volumes of between 16,438 and 27,397 gallons, respectively. Maximum
21 marine research facility sanitary seawater discharge, based on a 100% recirculating
22 seawater system with a 10 times per year turnover rate would be 27,397 gallons/day.
23 However, should a combination of recirculation be used, seawater discharge volume
24 would be significantly less.

25 Used seawater would require treatment prior to discharge to the sanitary sewer or
26 harbor. Should sanitary sewer discharge be involved, discharges would need to be
27 scheduled to avoid negative impacts on the Terminal Island Treatment Plant, and
28 would be sampled and monitored to ensure compliance with industrial waste
29 discharge requirements for sanitary sewer discharge. In addition, filters used in the
30 recirculated seawater cleansing process must be backwashed to maintain the
31 cleansing ability. The backwash would require discharge to the sanitary sewer.
32 Recirculation systems minimize water in-take and are able to better control
33 fluctuations in water quality. However, recirculation systems are space intensive,
34 requiring a large footprint for storage tanks and life support/treatment systems, and
35 are energy intensive. In addition, due to the re-use of water, biological wastes are
36 concentrated, and discharged water requires a greater level of treatment than flow-
37 through systems for harbor discharge, resulting in additional space needs and energy
38 resources.

39 As in the case of the flow-through system, in-take seawater may be chilled, or heated,
40 as appropriate for the tanks and research being conducted. However, water
41 temperature would not be a consideration for seawater discharged to the sanitary
42 sewer.

1 **ES.3.3.8.2 Wave Tank Seawater In-take and Discharge**

2 A separate seawater intake and treatment system would be developed for the wave
3 tank during Phase II. As mentioned previously, the proposed wave tank has a total
4 proposed volume of approximately 14,361,600 gallons, and the in-take is proposed to
5 be located along the Berths 70–71 wharf in the main channel.

6 The gallon per day seawater in-take for filling the proposed wave tank would largely
7 be dependent upon the time allocated to initially fill the tank. A 90-day tank fill time
8 would require 159,574 gallons/day. The in-take flows would be limited to 0.5 foot
9 per second or less. After the initial filling of the wave tank, ongoing seawater in-take
10 needs would be minimal because discharges from the wave tank would be infrequent
11 and intermittent.

12 Once filled, the seawater in the wave tank would be chemically treated to eliminate
13 marine growth within the tank and retained in stasis except on rare occasions when
14 lower water levels would be needed for a study. On such occasions water may be
15 discharged from the tank. Upon completion of the study, seawater would be needed
16 to again fill the tank. Prior to discharge, chemically treated water would be filtered to
17 ensure that chemicals used to treat the water are removed prior to discharge to the
18 harbor or would be discharged to the sanitary sewer. Discharges would be tested and
19 monitored to ensure compliance with all applicable discharge requirements. The
20 wave tank harbor discharge location would be adjacent to the in-take location along
21 the Berths 70–71 wharf in the main channel.

22 **ES.3.3.9 Waterfront Promenade**

23 The San Pedro Waterfront (SPW) project EIS/EIR (LAHD 2009) assessed the
24 construction of a continuous waterfront pedestrian promenade throughout the
25 waterfront project site. Extending the promenade through a marine laboratory
26 facility could pose special challenges because the waterfront would be utilized for
27 vessel loading on a routine basis by forklifts, cranes, and other heavy equipment at
28 unpredictable intervals. The approximately 6,000-linear-foot promenade would be
29 constructed along the edge of the wharf in such a manner as to maintain public access
30 without creating a safety hazard or otherwise unduly impeding the work that is
31 necessary at a marine laboratory. As such, as part of the proposed Project, the
32 proposed location of the promenade would be along East 22nd Street and Signal
33 Street, and along the existing wharf that runs the perimeter of City Dock No. 1, to the
34 extent feasible. The south end of Berth 60 would be developed to accommodate a
35 public viewing area and platform.

36 **ES.3.3.10 Signal Street Improvements**

37 Signal Street would be repaved and realigned as part of the proposed Project. As part
38 of the realignment, a total of approximately 195 diagonal parking spaces would be
39 provided along one side of the street. The proposed Project would add 15 spaces

1 adjacent to the Berth 56 Learning Center building, 40 new spaces adjacent to the
2 Berth 57 transit shed, and 155 spaces adjacent to Berths 58–60. In addition, the
3 existing heavy rail tracks that are embedded within Signal Street would be removed
4 (approximately 8,000 lineal feet), and the area that is disturbed during the rail
5 removal would be repaved.

6 **ES.3.3.11 Utility Improvements**

7 The proposed Project would provide new utility connections to the proposed
8 buildings as well as the existing buildings to allow for the proposed project elements
9 described above. All connections would be located within the proposed project site
10 and would connect with the existing infrastructure located under Signal Street. In
11 addition to the general utility connections, the proposed Project would potentially
12 upgrade the existing sewer pump servicing the proposed project site. This upgrade to
13 the sewer pump would provide additional capacity to accommodate the proposed
14 Project under full buildout as well as additional future projects if needed.

15 **ES.3.4 Sustainable Design Project Features**

16 The proposed Project is intended to showcase LAHD’s commitment to sustainability.
17 The proposed Project would incorporate a number of sustainable elements focusing
18 on the effort of LAHD to create a green Port. These are analyzed as part of the
19 proposed Project within this Draft EIR. Additionally, the proposed Project would
20 incorporate several features to enhance the final design of the proposed Project.
21 Although not required to mitigate a significant impact, these design measures would
22 further minimize the proposed Project’s effect on surrounding uses and
23 environmental resources. The following proposed Project elements and design
24 measures are consistent with LAHD’s Sustainability Program and policies.

- 25 ■ Use recycled water if available for all landscaping and water feature purposes to
26 decrease the proposed Project’s use of potable water.
- 27 ■ Include drought-tolerant plants and shade trees in the planting palette.
- 28 ■ Require Leadership in Energy & Environmental Design (LEED™) certification
29 for all new buildings as feasible by implementing and ensuring consistency with
30 LAHD’s Green Building Policy; LEED Certification (minimum Silver) is
31 required for all new development over 7,500 square feet.
- 32 ■ Follow LAHD sustainable engineering design guidelines in the siting and design
33 of new development.
- 34 ■ Employ LAHD sustainability measures during construction and operation and
35 use recycled and locally derived materials for proposed project construction,
36 while achieving recycling goals for construction and demolition debris.
- 37 ■ Implement energy efficient design features in the final design to help ensure
38 energy needs are minimized to the extent feasible during construction and
39 operation of the proposed Project.

- 1 ■ Implement water quality and conservation design features in the final design to
2 help ensure water quality impacts are minimized during construction at the
3 water's edge and in the water and operationally through the use of construction
4 best management practices (BMPs) and bioswales.
- 5 ■ Implement aesthetic design features. Public art would be integrated into the
6 proposed project area and would include sculptural pieces. Views of the
7 waterfront would be created through the construction of the waterfront
8 promenade around the edge of the site. The proposed Project would also
9 implement the San Pedro Waterfront Development Design Guidelines to improve
10 efficiency and reduce glare.
- 11 ■ Implement pedestrian access features. Pedestrian access to the waterfront and
12 throughout the proposed project site would be improved through development of
13 a waterfront promenade. The proposed Project would also be designed to
14 accommodate the extension of the Waterfront Red Car Line, which was
15 previously approved under the SPW project in 2009.

16 **ES.4 Alternatives to the Proposed Project**

17 **ES.4.1 Basis of Alternatives Selection and Analysis**

18 State CEQA Guidelines Section 15126.6 requires that an EIR describe a range of
19 reasonable alternatives to a proposed project, or to the location of a proposed project
20 that could feasibly attain most of the basic objectives of the proposed project but
21 would avoid or substantially lessen any significant environmental impacts.
22 According to State CEQA Guidelines, the EIR should compare merits of the
23 alternatives and determine an environmentally superior alternative. CEQA requires
24 that an EIR present a range of reasonable alternatives to the proposed Project. LAHD
25 defines a reasonable range of alternatives in light of its legal mandates under the Port
26 of Los Angeles Tidelands Trust (Los Angeles City Charter, Article VI, Section 601),
27 the California Coastal Act (PRC Division 20 Section 30700 et seq.), and LAHD's
28 leasing policy (LAHD 2006).

29 The lead agencies may make an initial determination as to which alternatives are
30 feasible and therefore merit in-depth consideration, and which alternatives are
31 infeasible. The range of alternatives need not be beyond a reasonable range
32 necessary to permit a reasoned choice between the alternatives and the proposed
33 project.

34 According to CEQA regulations, the alternatives section of an EIR is required to:

- 35 ■ rigorously explore and objectively evaluate a reasonable range of alternatives;
- 36 ■ include reasonable alternatives not within the lead agency's jurisdiction or
37 congressional mandate, if applicable;
- 38 ■ include a "no project" alternative;

- 1 ■ develop substantial treatment to each alternative, including the proposed action,
2 so that reviewers may evaluate their comparative merits;
- 3 ■ identify the environmentally superior alternative;
- 4 ■ include appropriate mitigation measures (when not already part of the proposed
5 action or alternatives); and
- 6 ■ present the alternatives that were eliminated from detailed study and briefly
7 discuss the reasons for elimination.

8 In addition to the No Project Alternative, alternatives for an EIR usually take the
9 form of a reduced project size, different project design, or suitable alternative project
10 sites. The range of alternatives discussed in an EIR is governed by the “rule of
11 reason” that requires the identification of only those alternatives necessary to permit
12 a reasoned choice between the alternatives and the proposed project. An EIR need
13 not consider an alternative that would be infeasible. State CEQA Guidelines Section
14 15126.6 explains that the evaluation of project alternative feasibility can consider
15 “site suitability, economic viability, availability of infrastructure, general plan
16 consistency, other plans or regulatory limitations, jurisdictional boundaries, and
17 whether the proponent can reasonably acquire, control or otherwise have access to
18 the alternative site.” The EIR is also not required to evaluate an alternative that has
19 an effect that cannot be reasonably identified or that has remote or speculative
20 implementation, and that would not achieve the basic proposed project objectives.

21 This section provides a description of alternatives considered, including those
22 analyzed within this Draft EIR, as well as those considered but withdrawn from
23 further discussion, including the rationale for eliminating the other alternatives from
24 detailed analysis.

25 **ES.4.2 Alternatives Considered**

26 This document presents a reasonable range of alternatives pursuant to CEQA. LAHD
27 must define alternatives in light of the requirements of the Los Angeles City Charter,
28 the Los Angeles Tidelands Trust Grant, the Public Trust Doctrine, and the California
29 Coastal Act. These legal mandates demand that LAHD use the Port for the purposes
30 of promoting and accommodating waterborne commerce, navigation, fishery, and
31 related purposes.

32 Five alternatives, including the proposed Project and the No Project Alternative, were
33 considered and evaluated in regards to how well each met the objectives for the
34 proposed Project. Three of these alternatives were eliminated from detailed
35 consideration for various reasons, as discussed in Section ES.4.4 and Section 2.9.3.
36 Two of the alternatives met most of the proposed project objectives and are presented
37 in Section ES.4.3. In addition, the No Project Alternative was considered as required
38 by CEQA. Chapter 5, “Project Alternatives,” compares the proposed Project and the
39 alternatives and identifies the environmentally superior alternative.

40 The following alternatives were considered:

- 1 ■ Alternative 1—No Project Alternative
- 2 ■ Alternative 2—Reduced Project

3 The following alternatives were considered, but eliminated from further analysis:

- 4 ■ New Construction at Berths 57–60
- 5 ■ Alternative Site

6 **ES.4.3 Alternatives Analyzed in this EIR**

7 The proposed Project and two other alternatives meet most of the proposed project
8 objectives. The alternatives that were considered during preparation of this Draft
9 EIR include:

- 10 ■ Proposed Project
- 11 ■ Alternative 1—No Project Alternative
- 12 ■ Alternative 2—Reduced Project

13 Each of the alternative development scenarios has been carried forward for detailed
14 analysis in Chapter 5, “Project Alternatives,” and is summarized below.

15 **ES.4.3.1 Alternative 1—No Project Alternative**

16 Alternative 1 considers what would reasonably be expected to occur on the site if no
17 future discretionary actions occurred. LAHD would not issue any discretionary
18 permits or discretionary approvals, and would take no further action to construct or
19 permit the construction of any portion of the proposed Project. Under this
20 alternative, no construction impacts associated with a discretionary permit would
21 occur.

22 Under Alternative 1, the proposed Project would not be constructed. Berths 57–60
23 would continue to be used for SP Bait company operations; these berths would not be
24 converted to a marine research center, and wharf repair and transit shed repairs would
25 not occur. SCMI would continue to operate the 19,000-square-foot office building in
26 Fish Harbor and continue to face the inadequate space and conditions required for
27 their research. Berth 56 would continue with existing uses, which include the use of
28 a small building by CDFG and surface parking.

29 As part of the SPW project action (and not part of the proposed Project), the
30 Westway Terminal liquid bulk storage tanks would be removed, and Berths 70–71
31 would subsequently be remediated. With the exception of the existing historic
32 Westway/Pan-American Oil Company Pump House, which would remain, and the
33 existing office building, Berths 70–71 would remain vacant indefinitely after
34 remediation until new development plans could be established and evaluated.

1 The No Project Alternative would maintain the existing conditions at the proposed
 2 project site, and none of the proposed project objectives would be met.

3 **ES.4.3.2 Alternative 2—Reduced Project Alternative**

4 Under this alternative, only Berths 57–60 would be developed into marine research
 5 space to be occupied by SCMI, and repairs, rehabilitation, and upgrades would be
 6 made to Berth 57 and Berth 58–60 transit sheds and wharves as specified under
 7 Section ES.3.3.4 above. SCMI would be relocated to Berth 57, and SCMI facilities
 8 at Berth 260 would be demolished as described in Chapter 2, “Project Description.”

9 Development of Berths 70–71, including the NOAA facilities, opportunity site, and
 10 installation of the wave tank, would not occur. Because it is proceeding under a
 11 separate permitting process (i.e., not part of the proposed Project), the Westway
 12 Terminal liquid bulk storage tanks would be removed, and Berths 70–71 would
 13 subsequently be remediated. With the exception of the existing historic
 14 Westway/Pan-American Oil Company Pump House, which would remain, and the
 15 existing office building, Berths 70–71 would remain vacant indefinitely after
 16 remediation until new development plans could be established and evaluated. This
 17 alternative would also not include the auditorium at Berth 56 or the additional 15
 18 parking spaces proposed at Berth 56. The waterfront promenade would be
 19 constructed within City Dock No. 1 as part of implementation of the SPW project.
 20 Table ES-2 summarizes development under this alternative.

21 **Table ES-2.** Alternative 2: Reduced Project Alternative

| Phase/Element | Area |
|---|-----------|
| PHASE I (2012–2016) | |
| Berth 57 | |
| <ul style="list-style-type: none"> ■ Convert Berth 57 Transit Shed into SCMI Research Facility and Develop Marine Research- and Education-Related Facilities <ul style="list-style-type: none"> □ Office-Related Space (12,000 sf) <ul style="list-style-type: none"> ○ Faculty Office Space ○ Administrative Suite ○ Staff Support Facilities (toilets, showers, and lockers) □ Laboratory Related Space (34,500 sf) <ul style="list-style-type: none"> ○ Teaching Laboratories ○ Research Laboratories and Facilities ○ Lab Support Space ○ Building Support Facilities (machine shop, storeroom, chemical storage, hazardous waste, scuba gear, instrument support, etc.) □ Outdoor Space (8,200 sf)¹ | 46,500 sf |

| Total Project Area Structures | 249,600 sf |
| Total Parking Spaces Available for Proposed Project | 604 |
| Total Project Area Redeveloped and Enhanced | 18.85 acres ⁵ |
| ¹ Not a structure and is therefore not counted in total structure sf. ² Excludes demolition of existing SCMI Facility at Berth 260. ³ Acreage was calculated by taking the 8.00 acres of Phase I minus the 0.65 acres at Berth 56 for the auditorium and parking. ⁴ In addition to the 155 new parking spaces provided under Phase II, visitors and employees would have access to the 449 parking spaces identified under Phase I for a total of 604 spaces for the proposed Project. ⁵ Acreage was calculated by taking the Phase II total of 25.00 acres from the proposed Project and subtracting 14.3 for | |

| Phase/Element | Area |
|--|------|
| Berths 70–71. ⁶ Acreage was calculated by taking the total 33.8 acres from the proposed Project and subtracting 0.65 for Berth 56 and 14.3 for Berths 70–71. sf=square feet; lf = linear feet | |

1
2
3
4
5

Alternative 2 would meet a majority of the proposed project objectives except for Objective 2, which includes development of a natural seawater wave tank, and part of Objective 1, which includes the lecture hall/auditorium and classroom development at Berth 56 and adaptive reuse of Berths 70–71.

6 **ES.4.4 Alternatives Eliminated from Further** 7 **Consideration**

8
9
10
11
12
13
14
15
16

As discussed in Section ES.4.1 above, CEQA requires an EIR to present a range of reasonable alternatives to the proposed project, or to the location of the project, that could feasibly attain a majority of the basic project objectives, but would avoid or substantially lessen one or more significant environmental impacts of the project. CEQA also requires an evaluation of the comparative merits of the alternatives. An EIR is not required to consider alternatives that would be infeasible, would not reduce any identified significant impact, or would not meet a majority of the project objectives. Additional details regarding these alternatives and the reasons for rejecting them are included in Chapter 5, “Project Alternatives.”

17
18

The following proposed project alternatives were considered in the selection process but were rejected due to one or more of the following:

- 19
20
21
- infeasibility due to physical, legal, or technical factors;
 - inability to meet a majority of the project objectives; or
 - inability to reduce one or more identified significant impact(s).

22

The alternatives below were considered, but eliminated from further analysis:

- 23
24
- New Construction at Berths 57–60
 - Alternative Site

1 **ES.5 Environmental Impacts**

2 **ES.5.1 Scope of Analysis and Impacts Considered in** 3 **this Draft EIR**

4 The scope of this Draft EIR was established based on the Initial Study (IS) prepared
5 pursuant to CEQA (see Appendix A) and comments received during the NOP review
6 process. The breadth of the analysis and technical work plans developed during the
7 preparation of this Draft EIR were designed to ensure that comments received from
8 regulatory agencies and the public during this review process would be addressed.
9 The NOP scoping period lasted from December 3, 2010, until January 31, 2011, and
10 included one scoping meeting on Thursday, January 13, 2011. Public and agency
11 comments received during this period were considered in the scope of the analysis for
12 this EIR.

13 This Draft EIR focuses on the significant environmental effects of the proposed
14 Project and their relevance to the decision-making process. State CEQA Guidelines
15 (Section 15360) define the *environment* as follows:

16 The physical conditions which exist within the areas which will be affected
17 by a proposed project, including land, air, water, minerals, flora, fauna,
18 ambient noise, and objects of historic or aesthetic significance.

19 Based on the Initial Study, the following issues have been determined to be
20 potentially significant and are therefore evaluated in this Draft EIR:

- 21 ■ Aesthetics
- 22 ■ Air Quality and Greenhouse Gases
- 23 ■ Biological Resources
- 24 ■ Cultural Resources
- 25 ■ Geology
- 26 ■ Groundwater and Soils
- 27 ■ Hazards and Hazardous Materials
- 28 ■ Land Use and Planning
- 29 ■ Noise
- 30 ■ Public Services and Recreation
- 31 ■ Transportation and Circulation—Ground and Marine
- 32 ■ Utilities
- 33 ■ Water Quality, Sediments, and Oceanography

1 Chapter 3, “Environmental Analysis,” discusses the issues that would be significantly
2 affected by the proposed Project. The criteria for determining the significance of
3 environmental impacts in this Draft EIR analysis are described in the “Thresholds of
4 Significance” sections for each resource topic in Chapter 3. Mitigation measures to
5 reduce impacts to less-than-significant levels are proposed whenever feasible.

6 **ES.5.2 Impacts Not Considered in this Draft EIR**

7 The scope of this Draft EIR was established based on the NOP, which identified
8 potential impact areas of the proposed Project. The NOP also determined that
9 agricultural resources, mineral resources, and population and housing would not be
10 affected by the proposed Project. In accordance with CEQA, issues found in the
11 NOP/Initial Study that would have no impact or less-than-significant impact would
12 not require further evaluation in the EIR.

13 **ES.5.3 Impacts of the Proposed Project**

14 Sections 3.1 through 3.13 discuss the anticipated potential environmental effects of
15 the proposed Project. The 13 issues listed above are discussed in these sections, and
16 mitigation measures to avoid impacts or reduce impacts to less-than-significant levels
17 are proposed whenever possible. Chapter 5, “Project Alternatives,” discusses the
18 anticipated potential environmental effects of the alternatives. Chapter 6,
19 “Environmental Justice,” evaluates the potential for the proposed Project to result in
20 serious and adverse impacts that disproportionately affect low-income and/or
21 minority populations. Summary descriptions of the significant impacts, mitigation
22 measures, and residual impacts for the proposed Project are presented in Table ES-3
23 below.

24 For each of the 13 environmental resources analyzed in this Draft EIR, Chapter 3
25 identifies significant impacts associated with the proposed Project. The following
26 sections describe the significant and less-than-significant impacts.

27 **ES.5.3.1 Summary of Significant and Unavoidable Impacts**

28 Table ES-3 identifies significant unavoidable impacts associated with the proposed
29 Project. This Draft EIR has determined that implementation of the proposed Project
30 would result in significant and unavoidable impacts on the following:

- 31 ■ Air Quality and Greenhouse Gases
- 32 ■ Cultural Resources
- 33 ■ Noise

ES.5.3.2 Summary of Significant Impacts that Can Be Mitigated, Avoided, or Substantially Lessened

Table ES-3 identifies significant impacts associated with the proposed Project that can be mitigated, avoided, or substantially lessened. This Draft EIR has determined that implementation of the proposed Project would result in significant impacts that can be mitigated to less than significant on the following:

- Biological Resources
- Hazards and Hazardous Materials
- Land Use and Planning
- Transportation (Ground)

1 **Table ES-3.** Summary of Impact Determinations

| <i>Environmental Impacts</i> | <i>Impact Determination</i> | <i>Mitigation Measures</i> | <i>Impacts after Mitigation</i> |
|--|-----------------------------|----------------------------|---------------------------------|
| 3.1 Aesthetics | | | |
| Construction | | | |
| AES-1a: Construction of the proposed Project would not result in an adverse effect on a scenic vista from a designated scenic resource due to obstruction of views. | Less than significant | No mitigation is required. | Less than significant |
| AES-2a: Construction of the proposed Project would not substantially damage scenic resources (including, but not limited to, trees, rock outcroppings, and historic buildings) within a state scenic highway. | No impact | No mitigation is required. | No impact |
| AES-3a: Construction of the proposed Project would not substantially degrade the existing visual character or quality of the site or its surroundings. | Less than significant | No mitigation is required. | Less than significant |
| AES-4a: Construction of the proposed Project would not result in an adverse effect due to shading on the existing visual character or quality of the site or its surroundings. | Less than significant | No mitigation is required. | Less than significant |
| AES-5a: Construction of the proposed Project would not create a new source of | No impact | No mitigation is required. | No impact |

| <i>Environmental Impacts</i> | <i>Impact Determination</i> | <i>Mitigation Measures</i> | <i>Impacts after Mitigation</i> |
|---|-----------------------------|----------------------------|---------------------------------|
| substantial light or glare that would adversely affect day or nighttime views of the area. | | | |
| Operations | | | |
| AES-1b: Operation of the proposed Project would not result in an adverse effect on a scenic vista from a designated scenic resource due to obstruction of views. | Less than significant | No mitigation is required. | Less than significant |
| AES-2b: Operation of the proposed Project would not substantially damage scenic resources (including, but not limited to, trees, rock outcroppings, and historic buildings) within a state scenic highway. | No impact | No mitigation is required. | No impact |
| AES-3b: Operation of the proposed Project would not substantially degrade the existing visual character or quality of the site or its surroundings. | Less than significant | No mitigation is required. | Less than significant |
| AES-4b: Operation of the proposed Project would not result in an adverse effect due to shading on the existing visual character or quality of the site or its surroundings. | Less than significant | No mitigation is required. | Less than significant |
| AES-5b: Operation of the proposed Project would not create a new source of | Less than significant | No mitigation is required. | Less than significant |

|--|-----------------------------|--|------------------------------------|
| substantial light or glare that would adversely affect day or nighttime views of the area. | | | |
| 3.2. AIR QUALITY AND GREENHOUSE GASES | | | |
| Construction | | | |
| <p>AQ-1: The proposed Project would result in construction-related emissions that exceed an SCAQMD threshold of significance.</p> | <p>Significant</p> | <p>MM AQ-1: Implement Harbor Craft Engine Standards. All harbor craft used during the construction phase of the proposed Project will, at a minimum, be repowered to meet EPA Tier 2. Additionally, where available, harbor craft will meet EPA Tier 3 or cleaner marine engine emission standards. Analysis conservatively reflects the use of engines that meet EPA Tier 2 standards.</p> <p>This harbor craft measure will be met unless one of the following circumstances exists, and the contractor is able to provide proof of its existence:</p> <ul style="list-style-type: none"> ▪ A piece of specialized equipment is unavailable in a controlled form within the state of California, including through a leasing agreement. ▪ A contractor has applied for necessary incentive funds to put controls on a piece of uncontrolled equipment planned for use on the proposed Project, but the application process is not yet approved, or the application has been approved but funds are not yet available. ▪ A contractor has ordered a control device for a piece of equipment planned for use on the proposed Project, or the contractor has ordered a new piece of controlled equipment to replace the uncontrolled equipment, but that order has not been completed by the manufacturer or dealer. In addition, for this exemption to apply, the contractor must have attempted to lease controlled equipment to avoid using uncontrolled equipment, but no dealer within 200 miles of the proposed Project has the controlled equipment available for lease. | <p>Significant and unavoidable</p> |

| <i>Environmental Impacts</i> | <i>Impact Determination</i> | <i>Mitigation Measures</i> | <i>Impacts after Mitigation</i> |
|------------------------------|-----------------------------|--|---------------------------------|
| | | <p>MM AQ-2: Implement Fleet Modernization for Construction Equipment.</p> <ul style="list-style-type: none"> ▪ Tier Specifications: <ul style="list-style-type: none"> a. <u>From the start of construction through December 31, 2014:</u> All off-road diesel-powered construction equipment greater than 50 hp, except marine vessels and harbor craft, will meet Tier-3 off-road emission standards at a minimum. In addition, all construction equipment greater than 50 hp will be retrofitted with a CARB-verified Level 3 Diesel Emission Control Strategy (DECS). Any emissions control device used by the contractor will achieve emissions reductions that are no less than what could be achieved by a Level 3 DECS for a similarly sized engine as defined by CARB regulations. b. <u>From January 1, 2015:</u> All off-road diesel-powered construction equipment greater than 50 hp, except marine vessels and harbor craft, will meet Tier-4 off-road emission standards at a minimum. Any emissions control device used by the contractor will achieve emissions reductions that are no less than what could be achieved by a Level 3 DECS for a similarly sized engine as defined by CARB regulations. <p>A copy of each unit’s certified tier specification, BACT documentation, and CARB or SCAQMD operating permit will be provided at the time of mobilization of each applicable unit of equipment. The above “Tier Specifications” measures will be met, unless one of the following circumstances exists, and the contractor is able to provide proof that any of these circumstances exists:</p> <ul style="list-style-type: none"> ▪ A piece of specialized equipment is unavailable within 200 miles of the Port of Los Angeles, including through a leasing agreement. If this circumstance exists, the equipment must comply with one of the options contained in the Step-Down Schedule as shown in Table 3.2-14. At no time will equipment meet less than a Tier 1 engine standard with a CARB40-verified Level 2 DECS. | |

| <i>Environmental Impacts</i> | <i>Impact Determination</i> | <i>Mitigation Measures</i> | <i>Impacts after Mitigation</i> | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

| <i>Environmental Impacts</i> | <i>Impact Determination</i> | <i>Mitigation Measures</i> | <i>Impacts after Mitigation</i> |
|------------------------------|-----------------------------|--|---------------------------------|
| | | <p>(SCAQMD 2005).</p> <p>The construction contractor will reduce fugitive dust emissions by 74% from uncontrolled levels (SCAQMD 2007a). The proposed project construction contractor will specify dust-control methods that will achieve this control level in a SCAQMD Rule 403 dust control plan and will include holiday and weekend periods when work may not be in progress.</p> <p>Measures to reduce fugitive dust include, but are not limited to, the following:</p> <ul style="list-style-type: none"> ▪ Active grading sites will be watered every two hours. ▪ Contractors will apply approved non-toxic chemical soil stabilizers according to manufacturer's specifications to all inactive construction areas or replace groundcover in disturbed areas (previously graded areas inactive for ten days or more). ▪ Construction contractors will provide temporary wind fencing around sites being graded or cleared. ▪ Trucks hauling dirt, sand, or gravel will be covered in accordance with Section 23114 of the California Vehicle Code. ▪ Construction contractors will install wheel washers where vehicles enter and exit unpaved roads onto paved roads, or wash off tires of vehicles and any equipment leaving the construction site. Pave road and road shoulders. ▪ The use of clean-fueled sweepers will be required pursuant to SCAQMD Rule 1186 and Rule 1186.1 certified street sweepers. Sweep streets at the end of each day if visible soil is carried onto paved roads on site or on roads adjacent to the site to reduce fugitive dust emissions. ▪ A construction relations officer will be appointed to act as a community liaison concerning onsite construction activity including resolution of issues related to PM10 generation. | |

| <i>Environmental Impacts</i> | <i>Impact Determination</i> | <i>Mitigation Measures</i> | <i>Impacts after Mitigation</i> |
|------------------------------|-----------------------------|--|---------------------------------|
| | | <ul style="list-style-type: none"> ▪ Traffic speeds on all unpaved roads will be reduced to 15 mph or less. ▪ Temporary traffic controls such as a flag person will be provided during all phases of construction to maintain smooth traffic flow. ▪ Construction activities that affect traffic flow on the arterial system will be conducted during off-peak hours to the extent practicable. ▪ The grading contractor will suspend all soil disturbance activity when winds exceed 25 mph or when visible dust plumes emanate from a site; disturbed areas will be stabilized if construction is delayed. <p>MM AQ-4: Implement SCAQMD’s Super-Compliant Standard. Architectural coatings used on site will meet SCAQMD’s super-compliant VOC standard of 10 grams of VOC per liter.</p> <p>MM AQ-5: Implement the Clean Trucks Program for Construction Haul Trucks. Heavy duty diesel trucks used for hauling must meet the EPA 2007 emission standards for on road heavy duty diesel engines (EPA 2006) by 2012. The CTP applies to heavy duty trucks used during construction activities.</p> <p>MM AQ-6: Implement Best Management Practices. The following types of measures are required on construction equipment (including on-road trucks), as determined feasible and appropriate:</p> <ul style="list-style-type: none"> ▪ Use diesel oxidation catalysts and catalyzed diesel particulate trap; ▪ Maintain equipment according to manufacturers’ specifications ▪ Restrict idling of on-road heavy-duty trucks to a maximum of five minutes when not in use ▪ Install high-pressure fuel injectors on construction equipment vehicles ▪ Re-route construction trucks away from congested streets or sensitive receptor areas | |

| <i>Environmental Impacts</i> | <i>Impact Determination</i> | <i>Mitigation Measures</i> | <i>Impacts after Mitigation</i> |
|--|------------------------------|--|------------------------------------|
| | | <p>LAHD will implement a process by which to select additional BMPs to further reduce air emissions during construction. LAHD will determine the BMPs once the contractor identifies and secures a final equipment list and project scope. LAHD will then meet with the contractor to identify potential BMPs and work with the contractor to include such measures in the contract. BMPs will be based on BACT guidelines and may also include changes to construction practices and design to reduce or eliminate environmental impacts.</p> <p>MM AQ-7: Implement General Mitigation Measure. For any of the above mitigation measures, if a CARB-certified technology becomes available and is shown to be as good as or better in terms of emissions performance than the existing measure, the technology could replace the existing measure pending approval by LAHD. For construction, measures will be set at the time a specific construction contract is advertised for bid.</p> | |
| <p>AQ-2: The proposed Project would result in offsite ambient air pollutant concentrations during construction that exceed a threshold of significance.</p> | <p>Significant</p> | <p>Implement Mitigation Measures MM AQ-1 through MM AQ-7.</p> | <p>Significant and unavoidable</p> |
| <p>Operations</p> | | | |
| <p>AQ-3: The proposed Project would result in operational emissions that exceed a SCAQMD threshold of significance.</p> | <p>Significant</p> | <p>Implement Mitigation Measures MM AQ-4 and MM AQ-7.</p> | <p>Significant and unavoidable</p> |
| <p>AQ-4: The proposed Project would not result in offsite ambient air pollutant concentrations during operation that exceed a</p> | <p>Less than significant</p> | <p>No mitigation is required.</p> | <p>Less than significant</p> |

| <i>Environmental Impacts</i> | <i>Impact Determination</i> | <i>Mitigation Measures</i> | <i>Impacts after Mitigation</i> |
|--|-----------------------------|---|---------------------------------|
| threshold of significance. | | | |
| AQ-5: The proposed Project would not generate on road traffic that would contribute to an exceedance of the 1- or 8-hour CO standards. | Less than significant | No mitigation is required. | Less than significant |
| AQ-6: The proposed Project would not create an objectionable odor at the nearest sensitive receptor. | Less than significant | No mitigation is required. | Less than significant |
| AQ-7: The proposed Project would not expose receptors to significant levels of TACs. | Less than significant | No mitigation is required. | Less than significant |
| AQ-8: The proposed Project would not conflict with or obstruct implementation of an applicable air quality plan. | Less than significant | No mitigation is required | Less than significant |
| GHG-1: The proposed Project would produce GHG emissions that exceed CEQA thresholds. | Significant | MM GHG-1: Solar Panels. The Port shall review the feasibility of including the City Dock site on their Inventory of Potential PV Solar Sites at POLA from their December 2007 Climate Action Plan. This measure is not quantified. | Significant and unavoidable |
| GHG-2: The proposed Project would not conflict with any applicable plan, policy, or regulation adopted for the purpose of reducing GHG emissions. | Less than significant | No mitigation is required | Less than significant |

| <i>Environmental Impacts</i> | <i>Impact Determination</i> | <i>Mitigation Measures</i> | <i>Impacts after Mitigation</i> |
|--|-----------------------------|--|---------------------------------|
| 3.3 BIOLOGICAL RESOURCES | | | |
| Construction | | | |
| <p>BIO-1a: Construction activities would result in the loss of individuals, or the reduction of existing habitat, of a state- or federally listed endangered, threatened, rare, protected, or candidate, or a species of special concern, or the loss of federally listed critical habitat.</p> | <p>Significant</p> | <p>MM BIO-1. Avoid Marine Mammals. Via the construction contract and the development permit the LAHD will require that pile driving activities for construction of the proposed Project include establishment of a safety zone and monitoring of the area surrounding the operations for pinnipeds by a qualified marine biologist. The monitor will have the authority to halt operations unless, in the opinion of the Port’s project engineer (Engineer), halting operations would be unsafe. The safety zone will extend out to 500 meters from the site of the pile driving, wherever that activity is taking place.</p> <p>Before pile driving is scheduled to commence, observers on shore or in boats will survey the safety zone to ensure that no marine mammals are present. If marine mammals are observed within the safety zone, driving will be delayed until they move out of the area. If a marine mammal is seen above water and then dives below, the contractor will wait at least 15 minutes, and if no marine mammals are seen, it may be assumed that the animal has moved beyond the safety zone. This 15-minute criterion is based on a study indicating that pinnipeds dive for a mean time of up to about 4 minutes; the 15-minute delay will allow a more than sufficient period of observation to be reasonably sure the animal has left the vicinity.</p> <p>If pinnipeds enter the safety zone after pile has begun, pile driving will continue. The monitor will record the species and number of individuals observed and make note of their behavior patterns. If animals appear distressed, and if it is operationally safe to do so, the monitor will inform the Engineer that pile driving will cease until the animal leaves the area. In certain circumstances pile driving cannot be terminated safely and without severe operational difficulties. Therefore, if it is deemed operationally unsafe by the Engineer to discontinue pile driving activities, and a pinniped is observed in the safety zone, pile driving activities will continue <u>only</u> until the Engineer deems it safe to discontinue.</p> | <p>Less than significant</p> |

| <i>Environmental Impacts</i> | <i>Impact Determination</i> | <i>Mitigation Measures</i> | <i>Impacts after Mitigation</i> |
|--|------------------------------|--|---------------------------------|
| | | <p>MM BIO-2. Minimize In-water Pile Driving Noise. Via the construction contract the LAHD will require the contractor to use sound abatement techniques to reduce both noise and vibrations from pile driving activities. In addition to the “soft-start technique, which will be required at the initiation of each pile driving event or after breaks of more than 15 minutes, sound abatement techniques will include, but not be limited to, vibration or hydraulic insertion techniques, bubble curtains, isolation cage technology, sound aprons, and use of a cushion block on top of the pile being driven. Use of these techniques will reduce both the intensity of the underwater sound pressure levels radiating from the pile driving location and the area in which levels would exceed the Level A and B harassment levels for marine mammals.</p> <p>MM BIO-3. Conduct Nesting Bird Surveys. Between February 15 and September 1 and prior to ground-disturbing activities, a qualified biologist will conduct surveys for the presence of nesting birds protected under the MBTA and/or similar provisions of the California Fish and Game Code within areas of the proposed project study area that contain potential nesting bird habitat. Surveys will be conducted 24 hours prior to the clearing, removal, or grubbing of any vegetation or ground disturbance. If active nests are located, then a barrier installed at a 50-foot radius from the nest(s) will be established and the tree/location containing the nest will be marked and will remain in place and undisturbed until a qualified biologist performs a survey to determine that the young have fledged or the nest is no longer active.</p> | |
| <p>BIO-2a: Construction activities would not result in a substantial reduction or alteration of a state-, federally, or locally designated natural habitat, special aquatic site, or plant community, including wetlands.</p> | <p>Less than significant</p> | <p>No mitigation is required.</p> | <p>Less than significant</p> |

Such features may include, but not be limited to, hilltops, ridges, hillslopes, canyons, ravines, rock outcrops, water bodies, streambeds, and wetlands. | No impact | No mitigation is required. | No impact |
| Operations | | | |
| GEO-1b: Operation of the proposed Project would not result in substantial damage to structures or infrastructure, or expose people to substantial risk of injury from fault rupture, seismic ground shaking, liquefaction, or other seismically induced ground failure. | Less than significant | No mitigation is required. | Less than significant |
| GEO-2b: Operation of the proposed Project would not result in substantial damage to | Less than significant | No mitigation is required. | Less than significant |

| <i>Environmental Impacts</i> | <i>Impact Determination</i> | <i>Mitigation Measures</i> | <i>Impacts after Mitigation</i> |
|--|-----------------------------|----------------------------|---------------------------------|
| structures or infrastructure, or expose people to substantial risk involving tsunamis or seiches. | | | |
| GEO-3b: Operation of the proposed Project would not result in substantial damage to structures or infrastructure, or expose people to substantial risk of injury from land subsidence/settlement. | Less than significant | No mitigation is required. | Less than significant |
| GEO-4b: Operation of the proposed Project would not result in substantial damage to structures or infrastructure, or expose people to substantial risk of injury from expansive soils. | Less than significant | No mitigation is required. | Less than significant |
| GEO-5b: Operation of the proposed Project would not result in substantial damage to structures or infrastructure, or expose people to substantial risk of injury from landslides or mudslides. | Less than significant | No mitigation is required. | Less than significant |
| GEO-6b: Operation of the proposed Project would not result in substantial damage to structures or infrastructure, or expose people to substantial risk of injury from unstable soil conditions from excavation, grading, or fill. | Less than significant | No mitigation is required. | Less than significant |

| <i>Environmental Impacts</i> | <i>Impact Determination</i> | <i>Mitigation Measures</i> | <i>Impacts after Mitigation</i> |
|---|-----------------------------|----------------------------|---------------------------------|
| GEO-7b: Operation of the proposed Project would not destroy, permanently cover, or materially and adversely modify one or more distinct and prominent geologic or topographic features. Such features may include, but not be limited to, hilltops, ridges, hillslopes, canyons, ravines, rock outcrops, water bodies, streambeds, and wetlands. | No impact | No mitigation is required. | No impact |
| 3.6 GROUNDWATER AND SOILS | | | |
| Construction | | | |
| GW-1a. Construction of the proposed Project would not encounter toxic substances or other contaminants associated with historical uses of the Port, resulting in short-term exposure (duration of construction) to construction/operations personnel and/or long-term exposure to future site occupants. | Less than significant | No mitigation is required. | Less than significant |
| GW-2a. Construction of the proposed Project would not result in changes in the rate or direction of movement of existing contaminants, expansion of the area affected by contaminants, or increased level of groundwater | Less than significant | No mitigation is required. | Less than significant |

| <i>Environmental Impacts</i> | <i>Impact Determination</i> | <i>Mitigation Measures</i> | <i>Impacts after Mitigation</i> |
|--|-----------------------------|----------------------------|---------------------------------|
| contamination, which would increase risk of harm to humans. | | | |
| GW-3a: Construction of the proposed Project would not result in a demonstrable and sustained reduction in potable groundwater recharge capacity nor would construction result in a change in potable water levels. | No impact | No mitigation is required. | No impact |
| GW-4a: Construction of the proposed Project would not result in a violation of regulatory water quality standards at an existing production well, as defined in CCR, Title 22, Division 4, Chapter 15 and in the Safe Drinking Water Act. | No impact | No mitigation is required. | No impact |
| Operations | | | |
| GW-1b: Operation of the proposed Project would not result in exposure of soils containing toxic substances and petroleum hydrocarbons associated with prior operations, which would be deleterious to humans based on regulatory standards established by the lead agency for the site. | Less than significant | No mitigation is required. | Less than significant |
| GW-2b: Operation of the proposed Project would not | Less than significant | No mitigation is required. | Less than significant |

| <i>Environmental Impacts</i> | <i>Impact Determination</i> | <i>Mitigation Measures</i> | <i>Impacts after Mitigation</i> |
|---|-----------------------------|----------------------------|---------------------------------|
| result in expansion of the area affected by contaminants. | | | |
| GW-3b: Operation of the proposed Project would not result in a change to potable water levels. | No impact | No mitigation is required. | No impact |
| GW-4b: Operation of the proposed Project would not result in a violation of regulatory water quality standards at an existing production well, as defined in CCR, Title 22, Division 4, Chapter 15 and in the Safe Drinking Water Act. | No impact | No mitigation is required. | No impact |
| 3.7 HAZARDS AND HAZARDOUS MATERIAL | | | |
| Construction | | | |
| RISK-1a: Construction of the proposed Project would comply with applicable federal, state, regional, and local security and safety regulations, and Port policies guiding Port development. | No impact | No mitigation is required. | Less than significant |
| RISK-2a: Construction of the proposed Project would not substantially interfere with an existing emergency response or evacuation plan or require a new emergency or evacuation plan, thereby increasing the risk of injury or death. | Less than significant | No mitigation is required. | Less than significant |

| <i>Environmental Impacts</i> | <i>Impact Determination</i> | <i>Mitigation Measures</i> | <i>Impacts after Mitigation</i> |
|--|-----------------------------|--|---------------------------------|
| RISK-3a: Construction of the proposed Project would not result in a substantial increase in public health and safety concerns as a result of the accidental release, spill, or explosion of hazardous materials due to a tsunami. | Less than significant | No mitigation is required. | Less than significant |
| RISK-4a: Construction of the proposed Project would not substantially increase the likelihood of an accidental spill, release, or explosion of hazardous material(s) due to a terrorist action. | Less than significant | No mitigation is required. | Less than significant |
| RISK-5a: Construction of the proposed Project would not substantially increase the likelihood of an accidental spill, release, or explosion of hazardous material(s) as a result of proposed project-related modifications. | Less than significant | No mitigation is required. | Less than significant |
| RISK-6a: Construction of the proposed Project would introduce the general public to hazard(s) defined by the EPA and the Port RMP associated with offsite facilities. | Significant | MM RISK-1. Remove all hazardous materials with flashpoints below 140°F from Mike's fueling station. Mike's fueling station will cease to handle hazardous materials with flashpoints below 140°F per the letter sent from LAHD to Mike Albano dated June 16, 2008, regarding the successor permit to revocable permit No. 98-14 prior to the operation of the proposed waterfront promenade. Products with a flashpoint below 140°F will not be permitted within the project area (i.e., San Pedro Waterfront Project area). The successor permit to RP No. 98-14 to allow the operation for Mike's fueling station and continued lease of Mike's fueling station will only allow handling of products above said threshold. Prior to the operation of the waterfront | Less than significant |

| <i>Environmental Impacts</i> | <i>Impact Determination</i> | <i>Mitigation Measures</i> | <i>Impacts after Mitigation</i> |
|---|-----------------------------|---|---------------------------------|
| | | promenade, Mike’s fueling station will submit written confirmation identifying the complete removal of all hazardous materials on site with a flashpoint below 140°F as directed by the letter dated June 16, 2008. At the time of the written confirmation, Mike’s fueling station will also provide copies of all Material Safety Data Sheets (MSDS) for each product stored in bulk on site. | |
| Operations | | | |
| RISK-1b: Operation of the proposed Project would comply with applicable federal, state, regional, and local security and safety regulations, and LAHD policies guiding Port development. | No impact | No mitigation is required. | No impact |
| RISK-2b: Operation of the proposed Project would not substantially interfere with an existing emergency response or evacuation plan or require a new emergency or evacuation plan, thereby increasing the risk of injury or death. | Less than significant | No mitigation is required. | Less than significant |
| RISK-3b: Operation of the proposed Project would not substantially increase the likelihood of a spill, release, or explosion of hazardous material(s) due to a tsunami. | Less than significant | No mitigation is required. | Less than significant |
| RISK-4b: Operation of the proposed Project would not substantially increase the likelihood of a spill, release, or explosion of hazardous | Less than significant | No mitigation is required. | Less than significant |

| <i>Environmental Impacts</i> | <i>Impact Determination</i> | <i>Mitigation Measures</i> | <i>Impacts after Mitigation</i> |
|---|-----------------------------|----------------------------|---------------------------------|
| material(s) due to a terrorist action. | | | |
| RISK-5b: Operation of the proposed Project would not substantially increase the likelihood of an accidental spill, release, or explosion of hazardous material(s) as a result of proposed project-related modifications. | Less than significant | No mitigation is required. | Less than significant |
| RISK-6b: Operation of the proposed Project would introduce the general public to hazard(s) defined by the EPA and the Port RMP associated with offsite facilities. | Significant | Implement MM RISK-1. | Less than significant |
| 3.8 LAND USE AND PLANNING | | | |
| Construction | | | |
| LU-1a: Construction of the proposed Project would not be inconsistent with the adopted land use/density designation in the Community Plan, redevelopment plan, or specific plan for the site. | Less than significant | No mitigation is required. | Less than significant |
| LU-2a: Construction of the proposed Project would not be inconsistent with the General Plan or adopted environmental goals or policies contained in other applicable plans. | Less than significant | No mitigation is required. | Less than significant |
| Operations | | | |

| <i>Environmental Impacts</i> | <i>Impact Determination</i> | <i>Mitigation Measures</i> | <i>Impacts after Mitigation</i> |
|---|------------------------------|--|------------------------------------|
| <p>LU-1b: Operation of the proposed Project would not be inconsistent with the adopted land use/density designation in the Community Plan, redevelopment plan, or specific plan for the site.</p> | <p>Less than significant</p> | <p>No mitigation is required.</p> | <p>Less than significant</p> |
| <p>LU-2b: Operation of the proposed Project would be inconsistent with the General Plan or adopted environmental goals or policies contained in other applicable plans, which would result in an adverse physical effect on the environment.</p> | <p>Significant</p> | <p>Implement Mitigation Measure MM RISK-1 (see Section 3.7, “Hazards and Hazardous Materials”).</p> | <p>Less than significant</p> |
| <p>3.9 NOISE</p> | | | |
| <p>Construction</p> | | | |
| <p>NOI-1: Construction of the proposed Project would last more than 1 day but would not exceed existing ambient exterior noise levels by 10 dBA or more at a noise-sensitive use; construction activities lasting more than 10 days in a 3-month period would not exceed existing ambient exterior noise levels by 5 dBA or more at a noise-sensitive use.</p> | <p>Significant</p> | <p>MM NOI-1: Maintain Construction Equipment. All construction equipment powered by internal combustion engines will be properly muffled and maintained.</p> <p>MM NOI-2: Locate Equipment away from Noise-Sensitive Land Uses. All stationary noise-generating construction equipment, such as air compressors and portable power generators, will be located as far as practical from existing noise-sensitive land uses.</p> <p>MM NOI-3: Utilize Quiet Equipment. Quiet construction equipment (such as vibratory pile driving or pneumatic tools) will be utilized where practicable. Noise limits established in the City of Los Angeles Noise Ordinance will be fully complied with.</p> <p>MM NOI-4: Notify Sensitive Receptors. Cabrillo Way Marina liveaboards will be notified of the construction schedule in writing prior to the beginning of construction</p> | <p>Significant and unavoidable</p> |

| <i>Environmental Impacts</i> | <i>Impact Determination</i> | <i>Mitigation Measures</i> | <i>Impacts after Mitigation</i> |
|---|-----------------------------|----------------------------|---------------------------------|
| NOI-2: Construction activities would not exceed the ambient noise level by 5 dBA at a noise-sensitive use between the hours of 9 p.m. and 7 a.m. Monday through Friday, before 8 a.m. or after 6 p.m. on Saturday, or at any time on Sunday. | Less than significant | No mitigation is required. | Less than significant |
| NOI-3: The proposed Project would not expose persons to, or generate, excessive groundborne vibration or groundborne noise levels. | Less than significant | No mitigation is required. | Less than significant |
| Operation | | | |
| NOI-4: Operations would not result in ambient noise level measured at the property line of affected uses increasing by 3 dBA in CNEL to or within the “normally unacceptable” or “clearly unacceptable category,” or increasing in any way by 5 dBA or more. | Less than significant | No mitigation is required. | Less than significant |
| 3.10 PUBLIC SERVICES | | | |
| Construction | | | |
| PS-1a: Construction of the proposed Project would not substantially reduce public services such as law enforcement, emergency services, and park services. | Less than significant | No mitigation is required. | Less than significant |

| <i>Environmental Impacts</i> | <i>Impact Determination</i> | <i>Mitigation Measures</i> | <i>Impacts after Mitigation</i> |
|--|-----------------------------|----------------------------|---------------------------------|
| PS-2a: Construction of the proposed Project would not burden existing LAPD or Port Police staff levels and facilities such that the LAPD or Port Police would not be able to maintain an adequate level of service without constructing additional facilities that could cause significant environmental effects. | Less than significant | No mitigation is required. | Less than significant |
| PS-3a: Construction of the proposed Project would not require the addition of a new fire station or the expansion, consolidation, or relocation of an existing facility to maintain service. | Less than significant | No mitigation is required. | Less than significant |
| PS-4a: Construction of the proposed Project would not increase the demand for recreation and park services and facilities resulting in the physical deterioration of these facilities | Less than significant | No mitigation is required. | Less than significant |
| Operations | | | |
| PS-1b: Operation of the proposed Project would not substantially reduce public services such as law enforcement, emergency services, and park services. | Less than significant | No mitigation is required. | Less than significant |
| PS-2b: Operation of the | Less than significant | No mitigation is required. | Less than significant |

| <i>Environmental Impacts</i> | <i>Impact Determination</i> | <i>Mitigation Measures</i> | <i>Impacts after Mitigation</i> |
|--|-----------------------------|---|---------------------------------|
| proposed Project would not burden existing LAPD or Port Police staff levels and facilities such that the LAPD or Port Police would not be able to maintain an adequate level of service without constructing additional facilities that could cause significant environmental effects. | | | |
| PS-3b: Operation of the proposed Project would not require the addition of a new fire station or the expansion, consolidation, or relocation of an existing facility to maintain service. | Less than significant | No mitigation is required. | Less than significant |
| PS-4b: Operation of the proposed Project would not increase the demand for recreation and park services and facilities resulting in the physical deterioration of these facilities | Less than significant | No mitigation is required. | Less than significant |
| 3.11 TRANSPORTATION AND CIRCULATION—GROUND AND MARINE | | | |
| Ground Construction | | | |
| TC-1: Construction of the proposed Project would result in a short-term, temporary increase in construction-related truck and auto traffic, decreases in roadway capacity, and disruption of vehicular | Significant | MM TC-1: Develop and implement a Traffic Control Plan throughout proposed project construction. In accordance with the City’s policy on street closures and traffic diversion for arterial and collector roadways, the construction contractor will prepare a traffic control plan (to be approved by City and County engineers) before construction. The traffic control plan will include: <ul style="list-style-type: none"> ▪ a street layout showing the location of construction activity and | Less than significant |

| <i>Environmental Impacts</i> | <i>Impact Determination</i> | <i>Mitigation Measures</i> | <i>Impacts after Mitigation</i> |
|---------------------------------|-----------------------------|--|---------------------------------|
| <p>and nonmotorized travel.</p> | | <p>surrounding streets to be used as detour routes, including special signage;</p> <ul style="list-style-type: none"> ▪ a tentative start date and construction duration period for each phase of construction; ▪ the name, address, and emergency contact number for those responsible for maintaining the traffic control devices during the course of construction; and ▪ written approval to implement traffic control from other agencies, as needed. <p>Additionally, the traffic control plan will include the following stipulations:</p> <ul style="list-style-type: none"> ▪ provide access for emergency vehicles at all times; ▪ avoid creating additional delay at intersections currently operating at congested conditions, either by choosing routes that avoid these locations, or constructing during nonpeak times of day; ▪ maintain access for driveways and private roads, except for brief periods of construction, in which case property owners will be notified; ▪ provide adequate off-street parking areas at designated staging areas for construction-related vehicles; ▪ maintain pedestrian and bicycle access and circulation during proposed project construction where safe to do so; if construction encroaches on a sidewalk, a safe detour will be provided for pedestrians at the nearest crosswalk; if construction encroaches on a bike lane, warning signs will be posted that indicate bicycles and vehicles are sharing the roadway; ▪ utilize flag persons wearing OSHA–approved vests and using a “Stop/Slow” paddle to warn motorists of construction activity; ▪ maintain access to Metro and LADOT transit services and ensure that public transit vehicles are detoured; | |

| <i>Environmental Impacts</i> | <i>Impact Determination</i> | <i>Mitigation Measures</i> | <i>Impacts after Mitigation</i> |
|--|------------------------------|--|---------------------------------|
| | | <ul style="list-style-type: none"> ▪ post standard construction warning signs in advance of the construction area and at any intersection that provides access to the construction area; ▪ post construction warning signs in accordance with local standards or those set forth in the Manual on Uniform Traffic Control Devices (Federal Highway Administration 2009) in advance of the construction area and at any intersection that provides access to the construction area; ▪ during lane closures, have contractor and/or LAHD notify LAFD and LAPD, as well as the Los Angeles County Sheriff's and Fire Departments, of construction locations to ensure that alternative evacuation and emergency routes are designed to maintain response times during construction periods, if necessary; ▪ provide written notification to contractors regarding appropriate routes to and from construction sites, and weight and speed limits for local roads used to access construction sites; submit a copy of all such written notifications to the City of Los Angeles Planning Department; and ▪ repair or restore the road right-of-way to its original condition or better upon completion of the work. | |
| Ground Operations | | | |
| <p>TC-2a: Operation of the Proposed project would increase traffic volumes and degrade LOS at intersections within the proposed project vicinity.</p> | <p>Less than significant</p> | <p>No mitigation is required.</p> | <p>Less than significant</p> |

1 **ES.5.3.3 Summary of Less-than-Significant or No Impacts**

2 Based on the environmental review in this Draft EIR, as summarized in Table ES-3,
3 either less-than-significant impacts or no significant impacts are expected under
4 CEQA from the proposed Project in the following environmental issue areas:

- 5 ■ Aesthetics
- 6 ■ Geology and Soils
- 7 ■ Groundwater and Soils
- 8 ■ Public Services and Recreation
- 9 ■ Utilities
- 10 ■ Water Quality, Sediments, and Oceanography

11 **ES.5.3.4 Cumulative Impacts**

12 The proposed Project was analyzed in conjunction with other related projects in the
13 area for potential to contribute to significant cumulative impacts. The proposed
14 Project's incremental contribution would result in cumulatively considerable impacts
15 for the following resource areas:

- 16 ■ Air Quality and Greenhouse Gases
- 17 ■ Cultural Resources
- 18 ■ Noise

19 The proposed Project would either not result in cumulatively considerable impacts or
20 not result in cumulatively considerable impacts after applicable mitigation is applied
21 for the following resource areas:

- 22 ■ Aesthetics
- 23 ■ Biological Resources
- 24 ■ Geology and Soils
- 25 ■ Groundwater and Soils
- 26 ■ Hazards and Hazardous Materials
- 27 ■ Land Use
- 28 ■ Public Services and Recreation
- 29 ■ Transportation and Circulation—Ground and Marine
- 30 ■ Utilities
- 31 ■ Water Quality, Sediments, and Oceanography

1 Cumulative impact evaluations for each resource are included in Chapter 4,
2 “Cumulative Effects,” of this Draft EIR.

3 **ES.5.3.5 Environmental Justice**

4 CEQA is only concerned with the disclosure and mitigation of significant physical
5 environmental effects related to the construction and operation of a proposed project.
6 However, LAHD is committed to disclosing any disproportionate impacts a proposed
7 Project may have on minority and low-income residents.

8 The potential for the proposed Project to cause disproportionately serious and adverse
9 human health and environmental effects on low-income and minority populations is
10 discussed in the Environmental Justice analysis (Chapter 6).

11 The proposed Project would result in disproportionate effects on minority and low-
12 income populations as a result of significant impacts related to air quality (ambient
13 concentrations of criteria pollutants during construction). Other potentially
14 significant impacts of the proposed Project would either be reduced to less than
15 significant or less than cumulatively considerable through implementation of
16 mitigation measures, or would not have disproportionate effects on minority and low-
17 income populations.

18 **ES.5.3.6 Socioeconomic Impacts**

19 As mentioned above, CEQA is only concerned with the disclosure and mitigation of
20 significant physical environmental effects related to the construction and operation of
21 a proposed project. For the purposes of information disclosure, however,
22 socioeconomics and environmental quality issues are analyzed in Chapter 7 of this
23 EIR. Socioeconomics encompasses a number of topical areas, including employment
24 and income, population, and housing.

25 Existing businesses near Berth 71 include Mike’s Marine Fueling Station and the
26 municipal fish market, which would remain open during proposed project
27 construction and operation. The proposed Project would result in the redevelopment
28 of the City Dock No. 1 site and would attract marine science and research jobs to the
29 area (most of which are currently working in other locations). The proposed Project
30 would result in the adaptive reuse of transit sheds at Berths 57–60, wharf retrofits, a
31 waterfront café, the establishment of a marine science park, and development of a
32 new building for NOAA operations within Berths 70 and 71. Also, existing facilities
33 at Berth 260 would be relocated to the proposed project site. Because the proposed
34 Project would introduce employment and visitor-serving activities within the site,
35 proposed project impacts are expected to be beneficial on local businesses.

36 The proposed Project would lead to increased tax revenues by expanding the tax base
37 of the area through the introduction of the adaptive reuse of the transit sheds, the
38 waterfront café, and the marine science park. The construction of new public open

1 spaces in the form of plazas, and landscape and hardscape areas, would make the San
2 Pedro community more attractive to visitors. While it is difficult to quantify the
3 economic benefit that the new facilities would bring until final lease negotiations
4 have taken place, the Port expects that there would be an overall beneficial impact on
5 local business revenue.

6 The proposed Project would generate 2,233 direct construction jobs (based on 8.1
7 construction jobs/million dollars of construction cost; estimate from the U.S. Bureau
8 of Economic Analysis). Construction of the proposed Project is expected to take
9 place over the next 12 years, through 2024. The number of construction workers
10 employed and working on site would vary over the course of the construction period.
11 The direct construction jobs would also further result in 1,883 secondary jobs (based
12 on 0.84 jobs for every construction job, given by U.S. Bureau of Economic
13 Analysis). These secondary increases in employment are related to purchases from
14 materials supply firms and their suppliers, and household expenditures by workers,
15 referred to, when combined, as “indirect employment.”

16 Long-term operation of the proposed Project would not result in a marked increase in
17 jobs following final buildout in 2024. Researchers, university faculty, and
18 government employees, the primary intended users of the proposed Marine Research
19 Institute, are currently performing the same job duties in other locations within the
20 region (i.e., SCMI at Berth 260 and other universities within Southern California).
21 The proposed project would provide centralized laboratory and research facilities to
22 foster greater synergies amongst the users of the facilities at City Dock No. 1. The
23 proposed project facilities could potentially serve as a catalyst for specialized
24 researchers to locate to the South Bay region, but any increase would be negligible.

25 The proposed Project entails a deindustrialization of the waterfront; therefore, a
26 reduction in property value is not expected with the addition of public amenities like
27 the waterfront promenade and increased open space acreage, aesthetic improvements,
28 and transportation improvements. While proximity of the Port may historically have
29 led to lower residential property values in the communities nearest the Port compared
30 to more affluent communities in southern Los Angeles County, such as Redondo
31 Beach and Rancho Palos Verdes, residential property values in communities near the
32 Port have grown in recent years and do not exhibit depreciated or stagnant numbers.
33 However, the recent housing market slump has led to decreased property values
34 throughout California, a trend mirrored in the study area and the nearby communities.
35 It is not anticipated that the proposed Project would change residential property
36 trends in the areas immediately adjacent to the Port; however, as part of the larger
37 San Pedro Waterfront project and other deindustrialization efforts west of the Main
38 Channel, property values are expected to increase over time. Median home prices
39 increased at high rates in a number of communities in the South Bay area of Los
40 Angeles County from 1998 to 2008. Home prices increased in all communities
41 regardless of price levels at the beginning of the period. Those communities with the
42 highest growth rates were often communities with the lowest home prices.

1 **ES.5.3.7 Growth-Inducing Impacts**

2 State CEQA Guidelines require an EIR to discuss the ways in which a proposed
3 project could foster economic or population growth, or the construction of additional
4 housing, either directly or indirectly, in the surrounding environment. Chapter 8,
5 “Growth-Inducing Impacts,” discusses the ways in which the proposed Project could
6 foster growth either indirectly or directly.

7 The proposed Project would foster economic growth but would not directly induce
8 population growth or the construction of new housing in the Port’s region of
9 influence (Los Angeles, Orange, Riverside, San Bernardino, and Ventura Counties).
10 The proposed Project would include new office and research facilities as well as
11 supporting infrastructure and recreational uses that would improve local economic
12 conditions and public accessibility. However, this would not stimulate a significant
13 growth in population or economic growth that would cause indirect environmental
14 impacts. Finally, the proposed Project would potentially include an upgrade to the
15 existing sewer pump station, which would not require additional wastewater
16 treatment capacity or remove other obstacles to growth. Overall, the proposed
17 Project would not result in growth-inducing effects.

18 The proposed Project does not include the development of new housing or
19 population-generating uses or infrastructure that would directly induce population
20 growth. Furthermore, the proposed Project is located in an urban area that has
21 experienced significant development over the past century. The proposed Project
22 does not involve any land use plan amendments that would result in significantly
23 more intensive development or uses that currently exist. On the contrary, the
24 proposed Project is intended to de-industrialize a portion of the San Pedro Waterfront
25 to allow for less-intensive uses that are more compatible with the surrounding
26 community.

27 The proposed Project involves the adaptive reuse of existing warehouse buildings
28 within the Port for the proposed marine research center. The project would
29 consolidate existing research organizations and personnel that are currently
30 performing similar work in other scattered locations throughout the region. The
31 proposed project facilities could potentially serve as a catalyst for specialized
32 researchers to locate to the South Bay region, but any increase would be negligible.
33 It would not result in a major employment center or require the relocation of a
34 substantial number for people from outside the region.

35 The proposed Project would include infrastructure and transportation improvements
36 such as the extension of the waterfront promenade, improvements to Signal Street
37 that enhance pedestrian mobility and waterfront access, and the potential upgrade to
38 the sewer pump station. However, these improvements would be limited to the
39 project site, and are intended to accommodate the development of the proposed
40 Project (through Phase II). These improvements would not accommodate any further
41 expansion of the proposed uses, nor other enhancements to the proposed project area.

42 The proposed Project is expected to facilitate investment and interest in the Port as a
43 place of business and leisure. The proposed Project would introduce employment

1 and visitor-serving activities within the site, thereby resulting in some secondary
2 economic improvements for businesses in the local community that may serve these
3 patrons. The introduction of new public open spaces in the form of plazas, and
4 landscape and hardscape areas, would make the San Pedro community more
5 attractive to visitors. However, any secondary growth that may occur in the area as a
6 result of the proposed Project has already been planned as part of the SPW project.
7 The implementation of the SPW project is a 30-year buildout, and the proposed
8 Project is not expected to generate additional economic or physical growth beyond
9 that projected as part of the SPW project.

10 As discussed in Section 3.12, "Utilities," implementation of the proposed Project
11 would generate increased demand for water, natural gas, and electricity. However,
12 the proposed Project would not require upgrades or new construction of major water,
13 natural gas, or power infrastructure. It is possible that the existing sewer pump
14 station would be inadequate to accommodate operational wastewater from the
15 proposed project site during continuous peak loads. Therefore, the proposed Project
16 would potentially need to upgrade the existing pump to provide more capacity to
17 accommodate the proposed project demand. These improvements would
18 accommodate expected growth associated with the proposed Project.

19 **ES.5.3.8 Significant Irreversible Changes to the Environment**

20 Pursuant to Section 15126.2(c) of the State CEQA Guidelines, an EIR must consider
21 any significant irreversible environmental changes that would be caused by the
22 proposed Project should it be implemented.

23 The proposed Project would require the use of non-renewable resources, such as
24 waterfront, fossil fuels, and non-renewable construction materials. Operation of
25 individual facilities proposed under the proposed Project would result in an
26 irreversible commitment of non-renewable resources, including fossil fuels and
27 natural gas. Use of these resources, however, would not substantially deplete
28 existing supplies.

29 Fossil fuels and energy would be consumed during construction and operation
30 activities. Fossil fuels in the form of diesel oil and gasoline would be used for
31 construction equipment and vehicles. During operations, diesel oil and gasoline
32 would be used by ships, Port terminal equipment (e.g., cargo handling), and vehicles.
33 Electrical energy and natural gas would also be consumed during construction and
34 operation. These energy resources would be irretrievable and irreversible.

35 Construction activities would not irreversibly harm cultural resources, biological
36 resources or water quality, sediments, and oceanography. Non-recoverable materials
37 and energy would be used during construction and operational activities, but the
38 amounts needed would be accommodated by existing supplies. Although the
39 increase in the amount of materials and energy used would be limited, they would
40 nevertheless be unavailable for other uses.

1 Construction activities that result in physical changes to the environment have the
2 most potential to result in irreversible changes. However, none of the proposed
3 project elements would result in irreversible environmental damage. As discussed in
4 various sections of Chapter 3, “Environmental Analysis,” none of the proposed
5 project elements would result in irreversible environmental damage. As described in
6 Section 3.4, “Cultural Resources,” the proposed Project would result in significant
7 impacts on the historic Municipal Warehouse No. 1 and the eligible Municipal Pier
8 No. 1 historic district. The impacts would not result from direct physical changes to
9 the structures themselves, but rather as indirect effects from the introduction of a
10 five-story, 100,000-square-foot building for the wave tank facility. Impacts would
11 occur because the building would be incompatible with the historic setting and affect
12 the integrity of the existing historic building and district. However, the effect could
13 be reversed should the wave tank not be constructed or should it be removed at some
14 future date. The proposed Project would not have a significant impact on sensitive
15 biological species or communities (Section 3.3, “Biological Resources”) or result in
16 significant water quality impacts (Section 3.13, “Water Quality, Sediments, and
17 Oceanography”). The proposed Project would also not result in a permanent, adverse
18 change to the movement of surface water sufficient to produce a substantial change in
19 the current or direction of water flow as no dredge or fill activities would occur
20 (Section 3.13, “Water Quality, Sediments, and Oceanography”). As discussed in
21 Section 3.7, “Hazards and Hazardous Materials,” construction and demolition for the
22 proposed Project could potentially result in the release of hazardous materials.
23 Construction-related spills of hazardous materials would be subject to regulatory
24 control and cleanup, and would include the implementation of best management
25 practices to minimize the potential for an accidental release of petroleum products
26 and/or hazardous materials or explosions during construction. Moreover, potential
27 release of asbestos-containing materials and lead-based paint would be avoided
28 through the required implementation of local and state regulations, including South
29 Coast Air Quality Management District Rule 1403.

30 Impacts associated with operation of the proposed Project would occur as described
31 in Chapter 3, “Environmental Analysis.” However, such impacts would cease to
32 exist or change in some fashion should the proposed Project, or portions thereof,
33 cease to operate, change operations, or otherwise be redeveloped and reused.

34 **ES.6 Public Involvement**

35 During the scoping process, various individuals or organizations representatives
36 provided comments on the scope and content of the Draft EIR.

37 The NOP was issued on December 3, 2010, and mailed to all stakeholders, including
38 elected officials, residents, businesses, Port of Los Angeles tenants, and other
39 community based organizations. The NOP scoping period occurred between
40 December 3, 2010, and January 31, 2011. A public scoping meeting was held on
41 Thursday, January 13, 2011.

ES.6.1 Project Planning History and Community Involvement

The proposed Project was devised in concept during the planning for the SPW project. However, at the time, details for programming the site were not known, and, therefore, as part of the SPW project, the proposed project site was programmatically analyzed for future “institutional/research and development” use in the SPW project’s 2009 certified Final EIS/EIR.

The LAHD and SCMI, with support from the Annenberg Foundation, and advice and input from area academic and research institutions, local aquariums, business leaders, environmental organizations, and community groups in San Pedro and Wilmington, joined together to develop a City Dock No. 1 urban marine research center vision, as detailed in the resulting March 2009 visioning study (SCMI 2009). This visioning study compiles and organizes a diverse body of material from academic marine researchers at various campuses, community stakeholders, non-university educators, public officials, and designers into a single volume to envision the outlines of what has the potential to become a major center for marine research on the West Coast. Since completion of the visioning study, LAHD, SCMI, and other City Dock No. 1 stakeholders have been working together to further expand upon that conceptual plan. The proposed Project is a result of this joint effort.

ES.6.2 Scoping Activities

On December 3, 2010, the NOP was released and distributed to over 600 agencies, organizations, individuals, and the California Office of Planning and Research, State Clearinghouse. The NOP was also available in Spanish. Copies of the NOP were posted on the LAHD website:

http://www.portoflosangeles.org/environment/public_notices.asp

Hardcopies and CDs were also available at the Waterfront Information Center and at public scoping meetings.

Over 70,000 postcards were distributed notifying the public of the date of the scoping meeting and the term of the comment period.

Notice of the comment period and public scoping meetings was also posted in five local newspapers: *Los Angeles Times*, *Long Beach Press-Telegram*, *Daily Breeze*, *Random Lengths News*, and *La Opinión*. These newspapers were selected for their circulation and audience. The *Los Angeles Times* is circulated daily throughout the region and country. The *Long Beach Press-Telegram* is a daily, local newspaper distributed throughout Los Angeles County. The *Daily Breeze* is a daily newspaper distributed in South Los Angeles County. *Random Lengths News* is a free biweekly publication circulated in the communities of San Pedro, Palos Verdes Peninsula, Long Beach, Carson, Harbor City, Lomita, and Wilmington on Thursdays. *La*

1 *Opinión* is the largest Spanish-language newspaper in the United States and is
2 circulated daily throughout the region.

3 The public scoping meeting was held Port of Los Angeles Board Room in San Pedro,
4 California, on January 13, 2011, and took place from 6:00 p.m. to 8:30 p.m. A court
5 reporter was available for attendees to have their comments transcribed during the
6 open house session and the hearing. The meetings were staffed by LAHD and the
7 proposed Project's consultant team. Spanish interpreters were available to
8 accommodate Spanish-speakers. A transcript of the meeting was posted on the
9 LAHD website.

10 The public scoping meeting informational materials were available in English and
11 Spanish. The materials included a welcome sheet to explain the purpose and format
12 of the meeting, a public participation guide to summarize how the public could get
13 involved and provide input, comment sheets, speaker cards, and the NOP/Project
14 Description.

15 **ES.6.3 Issues Raised**

16 A summary of the comments received on the NOP during the scoping period can be
17 found in Table ES-4. This list includes issues identified in comment letters and at the
18 public meeting, along with the relevant sections of this EIR where they are addressed.

19 **ES.6.4 Issues to be Resolved**

20 Section 15123(b)(3) of the State CEQA Guidelines requires that an EIR contain
21 issues to be resolved; this includes whether or how to mitigate significant impacts.
22 The major issues to be resolved include decisions by the lead agencies as to whether:

- 23 ■ this EIR adequately describes the environmental impacts of the proposed Project
24 and alternatives,
- 25 ■ the recommended mitigation measures should be adopted or modified,
- 26 ■ additional mitigation measures need to be applied to the project, or
- 27 ■ the project should or should not be approved for implementation.

28 **ES.6.5 Port Community Advisory Committee Issues 29 Raised/Resolution**

30 The Port Community Advisory Committee (PCAC) was established in 2001 as a
31 standing committee of the Port of Los Angeles Board of Harbor Commissioners
32 (Board). The PCAC provides a public forum to discuss Port-related quality of life

1 issues through a series of subcommittees. These subcommittees provide guidance on
 2 environmental issues, review of EIRs, master planning, and Port redevelopment.

3 No PCAC members commented on the proposed Project during the NOP period.

4 **Table ES-4.** Summary of Public Comments and Section Where Addressed in the EIR

| <i>Commenter Name and Title</i> | <i>Comment Summary</i> | <i>Where Addressed in the DEIR</i> |
|--|---|------------------------------------|
| PROPOSED PROJECT DESCRIPTION AND PURPOSE | | |
| Jesse Marquez Executive Director Coalition for a Safe Environment | Research intentions including potential military weapons research | Chapter 2 “Project Description” |
| | Any public sea food source such as fish, sea mammal, shell fish, aquatic life or aquatic plant genetic research which involves non-natural genetic modification, non-reproduction or genetic use restrictive technology terminator technology which causes second generations to be sterile. | |
| | All research patents developed on public California Coastal Tidelands, at the Port and POLA owned property to be held in the public domain interest. | |
| | All tenants public, private and governmental CEO’s sign an annual statement under perjury of law that no such weapons research was performed on public California Coastal Tidelands, at the Port of Los Angeles and POLA owned property. | |
| | All tenants public, private and governmental annually within 30 days of submission, release or publication provide a copy of all research papers, reports, studies and annual reports to the Port of Los Angeles for placement on the POLA website for public access and provide free copies upon public request. | |
| | Every research tenant provide for free public access to visit their facility and research. | |
| | A minimum of one tenant must include research on California Coastal tidelands, wetlands, reefs, plant life, wildlife and aquatic life preservation, eco-systems habitat protection, mitigation, restoration and disaster recovery. | |
| | A minimum of one tenant must include research on waters, to include tidelands, river passages, estuaries, ocean waters preservation, disaster prevention, clean-up, recovery and remediation. | |
| | A minimum of one tenant must include research on global warming and climate change impacts on California Coastal tidelands, wetlands, reefs, plant life, wildlife, aquatic life, tidelands, river passages, estuaries and ocean waters. | |

| <i>Commenter Name and Title</i> | <i>Comment Summary</i> | <i>Where Addressed in the DEIR</i> |
|---|--|--|
| | <p>A minimum of one tenant be an aquaculture fish and shell fish hatchery that raises native California coastal fish and shell fish species in order to replenish that currently devastated fish and shell fish populations in San Pedro Bay.</p> <p>The Port of Los Angeles establish a grading and priority system for approving Tenants that incorporate the most public benefit research as described herein.</p> <p>Tenants allow potential small public sponsored research projects that may not involve universities, colleges and institutes or the government, yet may provide significant public benefits.</p> <p>While the NOP includes aquaculture we do not want to find out later the space is not available or so small it could not be a major public benefit because the land was awarded for some other big project idea. The NOP is too vague on information on the size of the proposed aquaculture component, its hatchling growing capacities and future production.</p> | |
| <p>Nancy Richardson LA Maritime Institute TopSail Youth Program</p> | <p>Would we be able to share shore-side space already being planned for offices, meeting rooms, storage, boat maintenance and repair? Will there be space for indoor storage? (With the Downtown Harbor plan, our current offices and storage will be demolished.)</p> <p>What are the plans for the Outdoor Teaching/ Outreach classroom? (Consider the opportunity for ships as dockside “classrooms.” Cabrillo Marine Aquarium is within walking distance of major water habitats: rocky shore, sandy beach, tide-pool and salt marsh...our ships can add experience on the ocean habitat.)</p> <p>How about plans for a (research) library? (LAMI has a collection of books with inadequate space to make them accessible for use.)</p> <p>Will “Support Facilities” include dockside Pump-Out facilities for vessel wastewater? (Existing pump-out facility is awkward – and costly - for our ships.)</p> <p>What are the plans for docks and docking? Considering surge conditions in the outer harbor. (Our ships are secure at floating docks further up the main channel, but could operate in and out of City Dock No.1, when in service of the MRC – depending on design plans for safe boarding of students.)</p> <p>Could there be space for sail and rigging repair – and training in these skills? (Since such space is mostly non-existent and inaccessible in So. Calif., this would be invaluable for our ships and attract other sailing school vessels in the Pacific.)</p> <p>For the Waterfront Café, how about using students in Restaurant</p> | <p>Chapter 2 “Project Description”</p> |

| <i>Commenter Name and Title</i> | <i>Comment Summary</i> | <i>Where Addressed in the DEIR</i> |
|---------------------------------|--|------------------------------------|
| | <p>and Hospitality classes from Banning HS MATCH Academy and/or from El Camino and Harbor College?</p> <p>Consider:</p> <ul style="list-style-type: none"> ▪ Sailing school vessels* for MRC expeditions would be fuel-efficient, for local excursions and distant voyages. (We have overnight accommodations for up to 30 + 8 crew on our LAMI ships.) ▪ Making LAMI ships and crew available as ‘Floating Laboratories Under Sail’ to complement MRC shore side programs – ▪ College, Graduate-level, Continuing Education, High School and Advanced Placement ▪ Underway seamanship training and sea-time for ship and boat operators ▪ Educational transits, day sails and overnights to research locations or island facilities ▪ Marine-life observations, data-gathering, census-taking in harbor and offshore sites ▪ ‘Green’ boat operation and maintenance ▪ Organizational/corporate leadership, team-building and management development ▪ Exchanging marine education curricula, linking national and state standards and USCG regulations, infusing Ocean Literacy Principles into diverse content areas and developing 21st Century skills ▪ Modeling, testing and interpreting ‘green’ technology and practices ▪ Exploring funding for equipping our ships with ‘green’ engines and equipment ▪ Educating youth and the public on the imperative of ‘green’ practices and relevant research and technology ▪ Supporting Port TechLA innovations ▪ Offering opportunities for MRC students sailing with TopSail to gain experience and credit as educators in an experiential learning environment ▪ Becoming mentors for TopSail Ocean Ambassadors (our pilot project) ▪ Gathering, analyzing and interpreting data, i.e. on HAB (Harmful Algae Blooms) | |

| <i>Commenter Name and Title</i> | <i>Comment Summary</i> | <i>Where Addressed in the DEIR</i> |
|--|---|--|
| | <ul style="list-style-type: none"> ▪ Giving community service -Exploring marine and maritime careers at sea and ashore. | |
| <p>Anthony Michaels Proteus Environmental Technologies</p> | <p>The focus of the review and the plan encompass the full mix of research, education, training, innovation, entrepreneurs, job creation and outreach to the public in a very balanced way. These are all important elements of the plan and engage a wide range of constituents. The current plan seems to focus on the needs of SCMI (which are important), but does so in a way that is out of balance with the plan that will lead to success for the overall facility. Bring in all elements of the plan, ensure their linkage with each other and with a diversity of outside communities and approve a plan that provides for this full mix and an adaptive balance of activities as opportunities arise.</p> <p>Let there be things to do and make sure that they are fun! Mix in the arts. Add in a variety of food opportunities. Encourage or even mandate regular public events. Make the promenade through this area an interactive science museum experience. Let the public peer into the buildings to see what is going on and have every building have a public space and a gift shop. Create community among the tenants and open that community to the public.</p> <p>Be fairly careful about how proscriptive you are on specific elements of the types of research or education are done. There are adequate safety mechanisms built into environmental laws, OSHA and other agencies to ensure that the standard practices in marine science are safe when these rules are followed. Placing additional restrictions on molecular biology, marine mammals, the types of fish that could be held, the types of class topics that can or cannot be done, whether the department of defense funds research or if any of it helps safeguard our military are all examples of things that I suggest not be too proscriptive in the EIR. Reference the existing laws and the safe records of the local universities. Maybe set up some kind of tenant review process for subleases. However, please don't micro-manage in advance who and what can use the facility. It would hinder its success in many different ways</p> | <p>Chapter 2 “Project Description”</p> |
| PROJECT DESCRIPTION—DESIGN | | |
| <p>Diana Nave President Northwest San Pedro Neighborhood Council</p> | <p>Evaluate linkages to the community so that the project does not become an enclave and include waterfront walkway enhancements in the City Dock 1 project that are similar or the same as have those approved as part of the LA Waterfront Plan.</p> | <p>Chapter 2 “Project Description”</p> <p>Chapter 3.8, “Land Use and Planning”</p> <p>Chapter 3.11, Transportation and Circulation—Ground and Marine</p> |

| <i>Commenter Name and Title</i> | <i>Comment Summary</i> | <i>Where Addressed in the DEIR</i> |
|--|---|---|
| Anthony Michaels Proteus Environmental Technologies | I suggest that you keep the use of that space flexible and generic in the EIR since it is hard to accurately predict exactly what kinds of companies might need that space | Chapter 2 “Project Description” |
| Liz Schiller- Johnson Grand Vision Foundation | The proposed project seems like a bit of a distant outpost. Can you do more to help us understand how the proposed Project won’t be a separate enclave and how the people involved will be more connected to the community? | Chapter 2 “Project Description” Chapter 3.8, “Land Use and Planning” |
| | Build in the linkages to blend an educational institution with a community. | Chapter 2 “Project Description” Chapter 3.8, “Land Use and Planning” Chapter 3.11, Transportation and Circulation—Ground and Marine |
| | Make sure there is at least a small café on the property. Let’s make sure that zoning and regulatory and endless security do not prevent people from visiting. | Chapter 2 “Project Description” |
| HAZARDS AND HAZARDOUS MATERIALS | | |
| Diana Nave President Northwest San Pedro Neighborhood Council | Evaluate removal of the existing above ground storage tanks and infrastructure at the former Westways facility site as part of all project alternatives. | Chapter 2 “Project Description” Chapter 3.7, “Hazards and Hazardous Materials” |
| | As part of this evaluation the future use of the Westways site should be evaluated as part of the City Dock 1 project and as part of the Los Angeles Waterfront plan should the City Dock 1 project not occur. | |
| | The final EIR should study sufficient alternatives so that should the City Dock 1 project not occur, future development at the Westways site can proceed as part of the approved LA Waterfront Plan. | Chapter 2 “Project Description” Chapter 5, “Project Alternatives” |
| PUBLIC SERVICES | | |
| Diana Nave President Northwest San Pedro Neighborhood Council | The EIR should discuss incorporation of linkages to local education programs | Chapter 2 “Project Description” |

| <i>Commenter Name and Title</i> | <i>Comment Summary</i> | <i>Where Addressed in the DEIR</i> |
|--|--|--|
| ALTERNATIVES | | |
| Anthony Michaels Proteus Environmental Technologies | Repair of the over-water piers may be incredibly expensive. Only a small proportion of the uses identified for the space require a lot of waterfront and, in practice, the whole thing might be successful with only part of that over-water landscape. Thus, the most cost-effective thing may be to tear down some of the warehouses and retain only those that need the waterfront space. I wonder if that balance could be incorporated into the EIR options or balance of options. It is unfortunate that the warehouses are partially over the water and this reality means that a gradation of options for new or reuse of the warehouses is warranted. | Chapter 2 “Project Description” Chapter 5, “Project Alternatives” |
